RESEARCH	I work broadly in computer graphics and computer vision, focusing on computational imaging: this is the joint design of optics, electronics, and computation to create imaging systems with unprecedented capabilities. Some examples include: imaging systems that can see around corners or through skin; passive 3D sensing systems; ultrafast programmable lenses; imaging systems that adapt to their environment. Technical keywords that often show up in my research include: non-line-of-sight imaging, single-photon imaging, lidar, sonar, interferometry, speckle, acousto-optics, physics-based rendering, differentiable rendering, volume rendering, Monte Carlo simulation, stochastic geometry, probabilistic modeling.
