The **US-China** Battle for Technological Supremacy

Paul Triolo, Practice Head, Geo-technology, Eurasia

**November 20th**
**Noon-1:20**

**HBH 1206**
RSVP in campus groups

A growing number of experts see the United States and China in a battle for technological supremacy that is being waged across a number of key fields, including AI. What risks and opportunities are presented by China's rise as a technological superpower? On Nov. 20, Paul Triolo of the Eurasia Group, will offer his unique insight on these issues to the CMU community. Paul leads the firm’s newest practice, focusing on global technology policy issues, cybersecurity, internet governance, ICT regulatory issues, and emerging areas such as automation, AI/Big Data, ambient intelligence, and fintech/blockchain. Prior to joining Eurasia Group, Paul served in senior positions within the US government for more than 25 years, focusing primarily on China’s rise as a science and technology (S&T) and cyber power.
