

Matlab Tutorial - II

Based on Matlab tutorial by
IPLab@SUT

What we did last week

- Basic math
- Environment
- Matrix and array operations
- Logical operations
- Strings, cells and structures

What we'll do today

- Scripts
- Functions
- Control flow
- Debugging
- I/O
- Efficiency tips

Programming/Debugging

Script and Function Files

- Script Files
 - Work as though you typed commands into MATLAB prompt
 - Variable are stored in MATLAB workspace
- Function Files
 - Let you make your own MATLAB Functions
 - All variables within a function are **local**
 - All information must be passed to functions as parameters
 - Subfunctions are supported

46

Basic Parts of a Function M-File

```

function y = mean(x)
% MEAN Average or mean value.
% For vectors, MEAN(x) returns the mean value.
% For matrices, MEAN(x) is a row vector
% containing the mean value of each column.
[m,n] = size(x);
if m == 1
    m = n;
end
y = sum(x)/m;
  
```

47

Flow Control Statements

if Statement

```
if ((attendance >= 0.90) & (grade_average >= 60))
    pass = 1;
end;
```

while Loops

```
eps = 1;
while (1+eps) > 1
    eps = eps/2;
end
eps = eps*2
```

48

Flow Control Statements for Loop

```
a = zeros(k,k) % Preallocate matrix
for m = 1:k
    for n = 1:k
        a(m,n) = 1/(m+n -1);
    end
end
```

switch Statement

```
method = 'Bilinear';
switch lower(method)
    case {'linear', 'bilinear'}
        disp('Method is linear')
    case 'cubic'
        disp('Method is cubic')
    otherwise
        disp('Unknown method.')
end
Method is linear
```

49

M-file Programming Features

- ❑ SubFunctions
- ❑ Varying number of input/output arguments
- ❑ **Local** and **Global** Variables
- ❑ Obtaining User Input
 - Prompting for Keyboard *Input*
 - Pausing During Execution
- ❑ Errors and Warnings
 - Displaying *error* and *warning* Messages
- ❑ Shell Escape Functions (**!** Operator)
- ❑ Optimizing MATLAB Code
 - Vectorizing loops
 - Preallocating Arrays

50

Function M-file

```
function r = ourrank(X,tol)
% rank of a matrix
s = svd(X);
if ( nargin == 1)
    tol = max(size(X)) * s(1) * eps;
end
r = sum(s > tol);
```

Multiple Input Arguments
use ()

```
>>r=ourrank(rand(5),.1);
```

```
function [mean,stddev] = ourstat(x)
[m,n] = size(x);
if m == 1
    m = n;
end
>>[m std]=ourstat(1:9);
```

Multiple Output
Arguments, use []

```
mean = sum(x)/m;
stddev = sqrt(sum(x.^2)/m - mean.^2);
```

51

Editing and Debugging M-Files

- ❑ What is an M-File?
- ❑ The Editor/Debugger
- ❑ Search Path
- ❑ Debugging M-Files
 - Types of Errors (*Syntax Error* and *Runtime Error*)
 - Using **keyboard** and ";" statement
 - Setting Breakpoints
 - Stepping Through
 - Continue, Go Until Cursor, Step, Step In, Step Out
 - Examining Values
 - Selecting the Workspace
 - Viewing **Datatypes** in the Editor/Debugger
 - Evaluating a Selection

43

Debugging

The screenshot shows the MATLAB Editor/Debugger interface. The main window displays a function file with the following code:

```

1: function [fac, 'vertices', vect] =
2:     ourstat(x)
3:     [m,n] = size(x);
4:     if m == 1
5:         m = n;
6:     end
7:     mean = sum(x)/m;
8:     stddev = sqrt(sum(x.^2)/m - mean.^2);
9:     disp('mean:');
10:    disp(mean);
11:    disp('stddev:');
12:    disp(stddev);
13:    vect = [];
14:    for j=1:m
15:        newvec = zeros(1, n);
16:        for i=1:n
17:            newvec(i) = x(j,i);
18:        end
19:        vect = [newvec; vect];
20:    end
21:    disp('vertices:');
22:    disp(vect);
23:    fac = sum(x.^2)/m - mean.^2;
24:    disp('fac:');
25:    disp(fac);
26: end

```

A breakpoint is set at line 10. The workspace window shows the following variables:

```

x: 1x9 double row vector
y: 1x9 double row vector

```

Annotations on the right side of the screenshot include:

- Select Workspace
- Set Auto-Breakpoints
- tips

44

Input/Output

Importing and Exporting Data

- Using the Import Wizard
- Using **Save** and **Load** command

```
save fname
save fname x y z
save fname -ascii
save fname -mat
```

```
load fname
load fname x y z
load fname -ascii
load fname -mat
```

32

Input/Output for Text File

- Read formatted data, reusing the format string N times.

```
» [A1..An]=textread(filename,format,N)
```

- Import and Exporting **Numeric** Data with General ASCII delimited files

```
» M = dlmread(filename,delimiter,range)
```

33

Graphics Fundamentals

35

Graphics

- Basic Plotting
plot, title, xlabel, grid, legend, hold, axis
- Editing Plots
Property Editor
- Mesh and Surface Plots
meshgrid, mesh, surf, colorbar, patch, hidden
- Handle Graphics

36

2-D Plotting

Syntax:

```
plot(x1, y1, 'clm1', x2, y2, 'clm2', ...)
```

Example:

```
x=[0:0.1:2*pi];
y=sin(x);
z=cos(x);
plot(x,y,x,z,'linewidth',2)
title('Sample Plot','fontsize',14);
xlabel('X values','fontsize',14);
ylabel('Y values','fontsize',14);
legend('Y data','Z data')
grid on
```

37

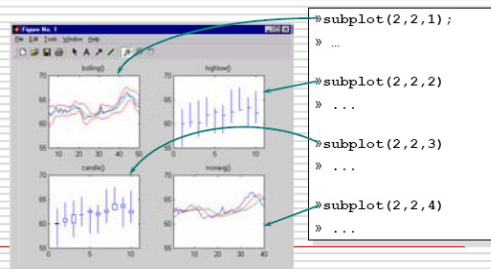

Sample Plot

38

Subplots

Syntax: `subplot(rows, cols, index)`

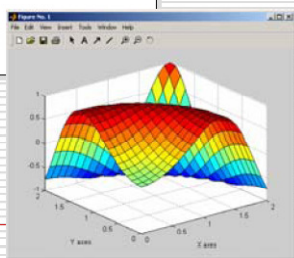

39

Surface Plot Example

```

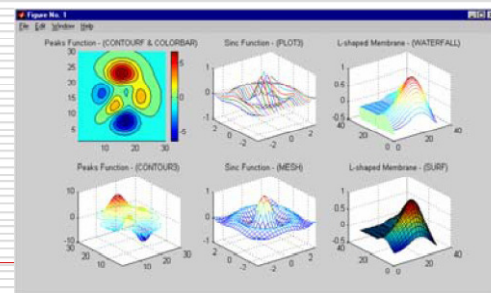

x = 0:0.1:2;
y = 0:0.1:2;
[xx, yy] = meshgrid(x,y);
zz=sin(xx.^2+yy.^2);
surf(xx,yy,zz);
xlabel('X axes');
ylabel('Y axes');
    
```

41

Specialized Plotting Routines

bar-bar3h-hist-area-pie3-rose

42

Tips and tricks

Efficiency

- Whenever possible, use matlab inbuilt functions
 - sum, .*, repmat..
- Pre-allocate space
- Vectorize code
- Profile your code
 - profile on;<your_code>; profile report

See research.microsoft.com/~minka/software/matlab.html for more tricks
