Subsumption Relations
Strict Subsumption

restaurant

coffee shop

Formal Definition:
\[ C_1 \sqsubseteq C_2 \text{ iff } \forall c \in C_1, c \in C_2 \]
Every instance of the sub-concept also belongs to the super-concept
Strict Subsumption

restaurant

Formal Definition:
\[ C_1 \subseteq C_2 \text{ iff } \forall c \in C_1, c \in C_2 \]
Every instance of the sub-concept also belongs to the super-concept

Coffee shops, while similar to cafés, are not restaurants due to the fact that they primarily serve and derive the majority of their revenue from hot drinks.

Wikipedia:

coffee shop

Merriam-Webster:

Coffee shop: a small restaurant that serves coffee and other drinks as well as simple foods
Strict Subsumption

Users search coffee shop as if it were a restaurant

restaurant

fast food restaurant  restaurant  coffee shop  school
Attribute Features

● Basic Features
  ○ How “similar” are the concepts?
  ○ How “specialized” is one concept to another?

● Variants
  ○ Different weights for attributes
    ■ frequency, instances, rank
  ○ Synonym-based attribute matching
Experimental Setting

- Sources of concepts
  - Is-A Network (47K)
    - Apply patterns (e.g., ‘X is a Y’, ‘Y such as X’) on the Web
    - Discard nodes with fewer than 10 children
  - Freebase (10K)
- Training on Is-A Network concepts
  - 5.6K manually-labeled subsumption relations
  - Agreement among (three) experts was low: 74%
Large-scale Prediction

- malware

- mosquito borne disease
- blood thinner
- fat soluble vitamin
- advertising agency
- bass player
- malicious software
Finding High-Quality Concepts

- Intuition: concepts with many strong signals (i.e., subsumption relations) are likely to be of high quality
- Compare
  - Latte: 50 most frequent concepts among top 1K predictions
  - Is-A Network (Similar Frequency): 50 concepts with similar frequencies of Is-A relations
  - Is-A Network (Most Frequent): 50 most frequent concepts
Concluding Observations

- Latte finds latent subsumptions that are useful for search engines using attributes
  - Is-A Network: 0.74 F1 / 2.4M predictions
  - Freebase: 0.98 F1 / 734 predictions
- Can also be used to clean resources with noisy concepts
- Challenge: What is the real notion of subsumption for Web applications?
