AI for Unstructured Data in Finance

The finance industry increasingly seeks insight from unstructured data. AI presents opportunities to address these needs by enriching unstructured data and mapping it to structured data sources - and finance offers a wealth of structured data for "grounding" unstructured data. In this talk, Amanda Stent will outline several NLP and ML projects from Bloomberg that show how AI can address finance analytics needs involving text data. It will conclude with some challenges to the research community that arise naturally from examining finance data.
