Join us to solve problems for a safer world.

At MITRE, we work across the whole of government to tackle difficult problems that challenge the safety, stability, and wellbeing of our nation through our operation of federally funded R&D centers as well as public-private partnerships. With a unique vantage point across federal, state, and local governments, as well as industry and academia, we discover new possibilities, create unexpected opportunities, and lead by pioneering together for public good to bring innovative ideas into existence in national security and the public sector.

Can you really have it all?

You can at MITRE. Professionally, you get to work with the best and brightest on big ideas that impact public — not commercial — interests. You get to work across government, industry, and academia to tackle our nation’s most complex challenges.

And personally, you have the flexibility to enjoy your life beyond the office. From the job you do every day to solve problems for a safer world, to the results that motivate you, to who you are outside of work, MITRE gives you what you need to be happy and successful.
