

VA: Name _____

Andrew ID _____

Quizlet 1

Given the following code snippet:

```
w = "4" + "3"
```

```
z = 9
```

```
z = z - 5
```

```
print("W:", w)
```

```
print("Z:", z * 3)
```

If we run the above code in the editor, what will be **printed** in the shell/interpreter?

```
x = 7
```

```
y = x + 3
```

```
x * 2
```

```
print("X:", x)
```

```
print("Y:", y)
```

If we run the above code in the editor, what will be **printed** in the shell/interpreter?
