

Project 3: Final Project

The Animation of Natural Phenomena

Adrien Treuille - Carnegie Mellon University

Step 1: Pick a Team / Project (Due Friday 11/12 23:59:59)

In this final project, you get to pick what you want to do!

You may work alone, or in teams of up to three members. Your final project will be graded proportionally to the number of team members: for example, two person teams must product twice the output of a one person team to get the same grade.

By this Friday, pick a topic that you would like to implement. It can be one of the papers that we described in class, or a completely new idea that you'd like to pursue. If there are any grad students in your team, then you **must** work on a new idea.

E-mail me a short, one paragraph description of what you would like to do, and who is on your team by the due date.

Step 2: Midpoint Check (Due Thursday 11/18 23:59:59)

You must send me an e-mail demonstrating that you have already begun coding on the project and describing what problems you might be having. Two to three paragraphs, and a screenshot or a movie should suffice.

Step 3: Final Project Presentations (Due Tuesday 12/7 13:00:00)

Deliverables:

- Each group should give a **5 minute** (strict) presentation with 2 minutes for questions. Include slides and a demo.
- Each group should submit a **2 page** PDF writeup on their project.
- Each group should submit a **video of their results** (without identifying information, such as your name).
- Each group should submit the source code for their project.

Videos and source code should be sent to the TA, [Jeehyung Lee](#).
