What Happened On Mars?

Mars Pathfinder probe (1997)

Nice launch

Nice transit

Nice de-orbit

Nice thump-down (inflatable air-bag)

Nice rover disembarkation

Nice rover *spontaneous reboots*

Internal Architecture

"Information bus" (blackboard/whiteboard/...)

- High-priority bus manager thread

Meteorological data gathering

- Occasional activity
- Low-priority weather data thread

**Communication with Earth**

- Medium-priority communication thread
Watchdog thread: "too quiet"? *Reboot*

What could go wrong?

Weather data locks "bus" memory to publish

High-priority bus manager must wait

What could go wrong?
What could go wrong?

What could go wrong?

Weather data locks "bus" memory to publish
High-priority bus manager **must wait**

Interrupt **makes** communication **runnable**

- "Medium" priority, so preempts weather data
- communication then attempts to lock bus
- Highest-priority runnable task, so it spin-waits

# What could go wrong?

What could go wrong?

What could go wrong?

Solution?

VxWorks has two mutex flavors

- **Normal**
- *Priority Inheritance*

Rover code initialized flavor via global variables
Rover flew with "debug" interpreter enabled

- **Read-eval loop waiting for commands**
- **% assign bus_mutex_flavor = MF_P_INHERIT**
All fixed
Weather Thread is Busy

Bus Thread Waits: Priority Inherited!

Bus Thread Waits: Priority Inherited!

"Low-Priority" Thread Finishes Fast

"Low-Priority" Thread Finishes Fast

Bus memory
