15-317 Constructive Logic

Course Syllabus
André Platzer

1 Overview

This multidisciplinary junior/senior-level course is designed to provide a thorough introduction to modern constructive logic, its roots in philosophy, its numerous applications in computer science, and its mathematical properties. The core topics of this class are intuitionistic logic, natural deduction, Heyting arithmetic, proofs as programs, connections between classical and constructive logic, inductive definitions, sequent calculus, and decidable classes. Advanced topics may vary from year to year and include type theory, logic programming, proof search, logical frameworks, temporal logic and model checking, modal logic.

Additional information, including a lecture schedule, homework policy, lectures notes, etc. can be found on the course home page at http://lfcps.org/course/constlog.html.

2 Course Information

Lectures see course web page

Recitations see course web page

Credit 9 units

Prerequisites 15-150 Functional Programming
For the cross-listed graduate version, 15-657, some experience with functional programming is recommended.

Textbook There is no textbook, but lecture notes will be on the course web page if available

Grading 40% Homework, 15% Midterm I, 15% Midterm II, 30% Final

COURSE SYLLABUS
Grade Cutoffs  A: ≥90%, B: ≥80%; C: ≥70%; D: ≥60%
   Grade ranges may be lowered slightly based on difficulty of home-
works and exams

Homework  Weekly, usually Tuesday to Tuesday. 3 late days total.

Midterm I  in class, closed book, date on course web page.

Midterm II  in class, closed book, date on course web page.

Final  TBD, closed book, date on course web page.

3 Learning Objectives

1. Understand the working principles of logic
2. Understand how the meaning of a proposition comes from its verifi-
cations
3. Distinguish propositions from judgments
4. Use proof rules to conduct formal proofs
5. Formalize informal problems into precise logical language
6. Justify how proof rules fit to one another in sound and complete ways
7. Assess the validity of a formal proof
8. Relate constructive logic to computation and constructive proofs to
   functional programs
9. Understand propositions as types and proofs as programs
10. Relate induction to recursion and use induction to prove properties
    in and about logical systems
11. Relate deductive proof search to computation in logic programming
12. Understand formulas as programs
13. Understand the principles and applications of logic programming

Course Syllabus
14. Identify logical core working principles of an algorithm or a data structure

15. Relate logical reasoning to operational reasoning

16. Distinguish classical reasoning from constructive reasoning

17. Ability to conduct proofs of appropriate scope in simple proof assistants

4 Take care of yourself

All of us benefit from support during times of struggle. You are not alone. There are many helpful resources available on campus and an important part of the college experience is learning how to ask for help. Asking for support sooner rather than later is often helpful.

If you or anyone you know experiences any academic stress, difficult life events, or feelings like anxiety or depression, we strongly encourage you to seek support. Counseling and Psychological Services (CaPS) is here to help: call 412-268-2922 and visit their website at http://www.cmu.edu/counseling/. Consider reaching out to a friend, faculty or family member you trust for help getting connected to the support that can help.

5 Individuals with Disabilities

Carnegie Mellon University makes every effort to provide accessible facilities and programs for individuals with disabilities. If you have a disability and require accommodations, contact the Office of Disability Resources at access@andrew.cmu.edu. Please let the instructors know early in the semester so that your needs may be appropriately met.
