

CMU SCS

15-826: Multimedia Databases and Data Mining

Text - part III
C. Faloutsos

CMU SCS

Outline

Goal: 'Find similar / interesting things'

- Intro to DB
- ➔ • Indexing - similarity search
- Data Mining

15-826 Copyright: C. Faloutsos (2005) 2

CMU SCS

Indexing - Detailed outline

- primary key indexing
- secondary key / multi-key indexing
- spatial access methods
- fractals
- ➔ • text
- multimedia
- ...

15-826 Copyright: C. Faloutsos (2005) 3

CMU SCS

Text - Detailed outline

- text
 - problem
 - full text scanning
 - inversion
 - signature files
- ➔ • clustering
- information filtering and LSI

15-826 Copyright: C. Faloutsos (2005) 4

CMU SCS

Vector Space Model and Clustering

- keyword queries (vs Boolean)
- each document: -> vector (HOW?)
- each query: -> vector
- search for 'similar' vectors

15-826 Copyright: C. Faloutsos (2005) 5

CMU SCS

Vector Space Model and Clustering

- main idea:

document

...data... → 'indexing' → aaron data zoo

↔
V (= vocabulary size)

15-826 Copyright: C. Faloutsos (2005) 6

Vector Space Model and Clustering

Then, group nearby vectors together

- Q1: cluster search?
- Q2: cluster generation?

Two significant contributions

- ranked output
- relevance feedback

15-826 Copyright: C. Faloutsos (2005) 7

Vector Space Model and Clustering

- cluster search: visit the (k) closest superclusters; continue recursively

15-826 Copyright: C. Faloutsos (2005) 8

Vector Space Model and Clustering

- ranked output: easy!

15-826 Copyright: C. Faloutsos (2005) 9

Vector Space Model and Clustering

- relevance feedback (brilliant idea) [Rocchio'73]

15-826 Copyright: C. Faloutsos (2005) 10

Vector Space Model and Clustering

- relevance feedback (brilliant idea) [Rocchio'73]
- How?

15-826 Copyright: C. Faloutsos (2005) 11

Vector Space Model and Clustering

- How? A: by adding the 'good' vectors and subtracting the 'bad' ones

15-826 Copyright: C. Faloutsos (2005) 12

CMU SCS

Outline - detailed

- main idea
- cluster search
- ➔ • cluster generation
- evaluation

15-826 Copyright: C. Faloutsos (2005) 13

CMU SCS

Cluster generation

- Problem:
 - given N points in V dimensions,
 - group them

15-826 Copyright: C. Faloutsos (2005) 14

CMU SCS

Cluster generation

- Problem:
 - given N points in V dimensions,
 - group them

15-826 Copyright: C. Faloutsos (2005) 15

CMU SCS

Cluster generation

We need

- Q1: document-to-document similarity
- Q2: document-to-cluster similarity

15-826 Copyright: C. Faloutsos (2005) 16

CMU SCS

Cluster generation

Q1: document-to-document similarity
(recall: 'bag of words' representation)

- D1: {'data', 'retrieval', 'system'}
- D2: {'lung', 'pulmonary', 'system'}
- distance/similarity functions?

15-826 Copyright: C. Faloutsos (2005) 17

CMU SCS

Cluster generation

A1: # of words in common
A2: normalized by the vocabulary sizes
A3: etc

About the same performance - prevailing one:
cosine similarity

15-826 Copyright: C. Faloutsos (2005) 18

Cluster generation

cosine similarity:

$$\text{similarity}(D1, D2) = \cos(\theta) = \frac{\sum(v_{1,i} * v_{2,i})}{\text{len}(v_1) * \text{len}(v_2)}$$

15-826 Copyright: C. Faloutsos (2005) 19

Cluster generation

cosine similarity - observations:

- related to the **Euclidean distance**
- weights $v_{i,j}$: according to tf/idf

15-826 Copyright: C. Faloutsos (2005) 20

Cluster generation

tf ('term frequency')

high, if the term appears very often in this document.

idf ('inverse document frequency')

penalizes 'common' words, that appear in almost every document

15-826 Copyright: C. Faloutsos (2005) 21

Cluster generation

We need

- Q1: document-to-document similarity
- ➔ Q2: document-to-cluster similarity

15-826 Copyright: C. Faloutsos (2005) 22

Cluster generation

- A1: min distance ('single-link')
- A2: max distance ('all-link')
- A3: avg distance
- A4: distance to centroid

15-826 Copyright: C. Faloutsos (2005) 23

Cluster generation

- A1: min distance ('single-link')
 - leads to elongated clusters
- A2: max distance ('all-link')
 - many, small, tight clusters
- A3: avg distance
 - in between the above
- A4: distance to centroid
 - fast to compute

15-826 Copyright: C. Faloutsos (2005) 24

CMU SCS

Cluster generation

We have

- document-to-document similarity
- document-to-cluster similarity

Q: How to group documents into 'natural' clusters

15-826 Copyright: C. Faloutsos (2005) 25

CMU SCS

Cluster generation

A: *many-many* algorithms - in two groups [VanRijsbergen]:

- theoretically sound ($O(N^2)$)
 - independent of the insertion order
- iterative ($O(N)$, $O(N \log(N))$)

15-826 Copyright: C. Faloutsos (2005) 26

CMU SCS

Cluster generation - 'sound' methods

- Approach#1: dendrograms - create a hierarchy (bottom up or top-down) - choose a cut-off (how?) and cut

15-826 Copyright: C. Faloutsos (2005) 27

CMU SCS

Cluster generation - 'sound' methods

- Approach#2: min. some statistical criterion (eg., sum of squares from cluster centers)
 - like 'k-means'
 - but how to decide 'k'?

15-826 Copyright: C. Faloutsos (2005) 28

CMU SCS

Cluster generation - 'sound' methods

- Approach#3: Graph theoretic [Zahn]:
 - build MST;
 - delete edges longer than 3* std of the local average

15-826 Copyright: C. Faloutsos (2005) 29

CMU SCS

Cluster generation - 'sound' methods

- Result:
 - why '3'?
 - variations
 - Complexity?

15-826 Copyright: C. Faloutsos (2005) 30

CMU SCS

Cluster generation - 'iterative' methods

general outline:

- Choose 'seeds' (how?)
- assign each vector to its closest seed (possibly adjusting cluster centroid)
- possibly, re-assign some vectors to improve clusters

Fast and practical, but 'unpredictable'

15-826 Copyright: C. Faloutsos (2005) 31

CMU SCS

Cluster generation - 'iterative' methods

general outline:

- Choose 'seeds' (how?)
- assign each vector to its closest seed (possibly adjusting cluster centroid)
- possibly, re-assign some vectors to improve clusters

Fast and practical, but 'unpredictable'

15-826 Copyright: C. Faloutsos (2005) 32

CMU SCS

Cluster generation

one way to estimate # of clusters k : the 'cover coefficient' [Can+] ~ SVD

15-826 Copyright: C. Faloutsos (2005) 33

CMU SCS

Outline - detailed

- main idea
- cluster search
- cluster generation
- ➡ • evaluation

15-826 Copyright: C. Faloutsos (2005) 34

CMU SCS

Evaluation

- Q: how to measure 'goodness' of one distance function vs another?
- A: ground truth (by humans) and
 - 'precision' and 'recall'

15-826 Copyright: C. Faloutsos (2005) 35

CMU SCS

Evaluation

- precision = (retrieved & relevant) / retrieved
 - 100% precision -> no false alarms
- recall = (retrieved & relevant) / relevant
 - 100% recall -> no false dismissals

15-826 Copyright: C. Faloutsos (2005) 36

- CMU SCS
- ## Evaluation
- compressing such a curve into a single number:
 - 11-point average precision
 - etc
- 15-826 Copyright: C. Faloutsos (2005) 38

- CMU SCS
