## 15-826: Multimedia Databases and Data Mining

Lecture #13: Power laws  
Potential causes and explanations  
*C. Faloutsos*

---

---

---

---

---

---

---

CMU SCS

## Must-read Material

- [Power laws, Pareto distributions and Zipf's law](#) Contemporary Physics 46, 323-351 (2005)

15-826 Copyright: C. Faloutsos (2011) 2

---

---

---

---

---

---

---

CMU SCS

## Optional Material

- (optional, but very useful: Manfred Schroeder *Fractals, Chaos, Power Laws: Minutes from an Infinite Paradise* W.H. Freeman and Company, 1991) – ch. 15.

15-826 Copyright: C. Faloutsos (2011) 3

---

---

---

---

---

---

---

CMU SCS

## Outline

Goal: 'Find **similar** / **interesting** things'

- Intro to DB
- ➔ • Indexing - similarity search
- Data Mining

15-826 Copyright: C. Faloutsos (2011) 4

---

---

---

---

---

---

---

---

CMU SCS

## Indexing - Detailed outline

- primary key indexing
- secondary key / multi-key indexing
- spatial access methods
  - z-ordering
  - R-trees
  - misc
- ➔ • fractals
  - intro
  - applications
- text

15-826 Copyright: C. Faloutsos (2011) 5

---

---

---

---

---

---

---

---

CMU SCS

## Indexing - Detailed outline

- fractals
  - intro
  - applications
    - disk accesses for R-trees (range queries)
    - dimensionality reduction
    - selectivity in M-trees
    - dim. curse revisited
    - "fat fractals"
    - quad-tree analysis [Gaede+]
- ➔ • nn queries [Belussi+]

---

---

---

---

---

---

---

CMU SCS

## Definition

- $p(x) = C x^{-a} \quad (x \geq x_{\min})$
- Eg., prob( city pop. between  $x + dx$ )

$\log(p(x))$

$\log(x_{\min}) \quad \log(x)$

15-826 Copyright: C. Faloutsos (2011) 8

---

---

---

---

---

---

---

---

CMU SCS

## For discrete variables

$$p_k = C k^{-a} \quad (k > 0)$$

Or, the Yule distribution:

$$p_k = C B(k, a)$$

$$B(k, a) = \Gamma(k)\Gamma(a)/\Gamma(k + a) \approx k^{-a}$$

15-826 Copyright: C. Faloutsos (2011) 9

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

CMU SCS

**Estimation for  $a$**

$$a = 1 + n \left[ \sum_{i=1}^n \ln(x_i / x_{\min}) \right]^{-1}$$

---

---

---

---

## Combination of exponentials

Let  $p(y) = e^{ay}$

- eg., radioactive decay, with half-life  $-a$
- (= collection of people, playing russian roulette)

Let  $x \sim e^{by}$

- (every time a person survives, we double his capital)

$$p(x) = p(y) * dy/dx = 1/b x^{(-1+a/b)}$$

- Ie, the final capital of each person follows P.L.

15-826

16

---

---

---

---

---

---

---

---

## Combination of exponentials

- Monkey on a typewriter:
- $m=26$  letters equiprobable;
- space bar has prob.  $q_s$
- Freq(  $x$ -th most frequent word)  $= x^{(-a)}$

see Eq. 47 of [Newman]:

$$a = [2 \ln(m) - \ln(1 - q_s)] / [\ln m - \ln(1 - q_s)]$$

15-826

17

---

---

---

---

---

---

---

---

## Inverses of quantities

- $y$  follows  $p(y)$  and goes through zero
- $x = 1/y$
- Then  $p(x) = \dots = -p(y) / x^2$
- For  $y \sim 0$ ,  $x$  has power law tail.

## Yule distribution and CRP

Chinese Restaurant Process (CRP):  
Newcomer to a restaurant

- Joins an existing table (preferring large groups)
- Or starts a new table/group of its own, with prob  $1/m$

a.k.a.: rich get richer; Yule process

15-826 Copyright: C. Faloutsos (2011) 24

---

---

---

---

---

---

---

---

**Yule distribution and CRP**

Then:

$$\text{Prob}(k \text{ people in a group}) = p_k$$

$$= (1 + 1/m) B(k, 2+1/m)$$

$$\sim k^{-(2+1/m)}$$

(since  $B(a,b) \sim a^{-b}$  : power law tail)

15-826 Copyright: C. Faloutsos (2011) 25

---

---

### Percolation and forest fires

A burning tree will cause its neighbors to burn next.

Which tree density  $p$  will cause the fire to last longest?

## Self-organized criticality

- Trees appear at random (eg., seeds, by the wind)
- Fires start at random (eg., lightning)
- Q1: What is the distribution of size of forest fires?

15-826 Copyright: C. Faloutsos (2011) 34

---

---

---

---

---

---

---

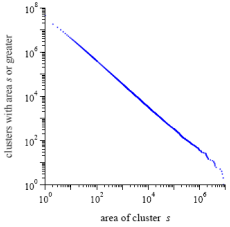

---

---

---

---

---

---

CMU SCS

## Self-organized criticality

- [Bak]: size of avalanches  $\sim$  power law:
- Drop a grain randomly on a grid
- It causes an avalanche if  $\text{height}(x,y)$  is  $>1$  higher than its four neighbors

[Per Bak: *How Nature works*, 1996]

15-826 Copyright: C. Faloutsos (2011) 38

---

---

---

---

---

## This presentation

- Definitions
- Examples and counter-examples
- Generative mechanisms
  - Combination of exponentials
  - Inverse
  - Random walk
  - Yule distribution = CRP
  - Percolation
  - Self-organized criticality
  - ➔ – Other

15-826 Copyright: C. Faloutsos (2011) 39

---

---

---

---

---

---

---

CMU SCS

## Other

- Random multiplication
- Fragmentation

-> lead to lognormals (~ look like power laws)

15-826 Copyright: C. Faloutsos (2011) 40

---

---

---

---

---

---

---

---

CMU SCS

## Others

Random multiplication:

- Start with C dollars; put in bank
- Random interest rate  $s(t)$  each year  $t$
- Each year  $t$ :  $C(t) = C(t-1) * (1 + s(t))$
- $\text{Log}(C(t)) = \text{log}(C) + \text{log}(\dots) + \text{log}(\dots) \dots \rightarrow$   
Gaussian

15-826 Copyright: C. Faloutsos (2011) 41

---

---

---

---

---

---

---

---

CMU SCS

## Others

Random multiplication:

- $\text{Log}(C(t)) = \text{log}(C) + \text{log}(\dots) + \text{log}(\dots) \dots \rightarrow$   
Gaussian
- Thus  $C(t) = \exp(\text{Gaussian})$
- By definition, this is Lognormal

15-826 Copyright: C. Faloutsos (2011) 42

---

---

---

---

---

---

---

---

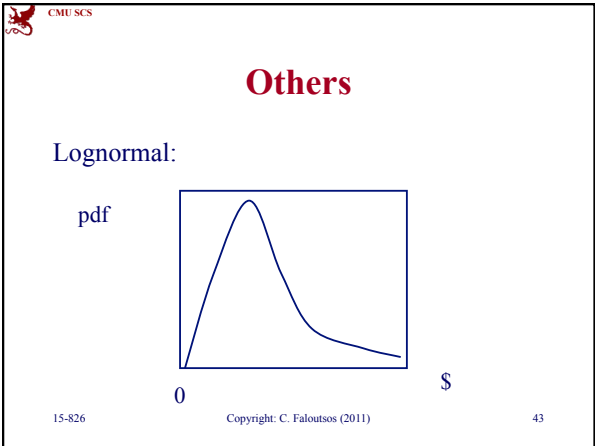

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

CMU SCS

## Other

- Random multiplication
- ➔ Fragmentation
- > lead to lognormals (~ look like power laws)

15-826 Copyright: C. Faloutsos (2011) 46

---

---

---

---

---

---

---

CMU SCS

## Other

- Stick of length 1
- Break it at a random point  $x$  ( $0 < x < 1$ )
- Break each of the pieces at random
- Resulting distribution: lognormal (why?)

15-826 Copyright: C. Faloutsos (2011) 47

---

---

---

---

---

---

---

CMU SCS

## Conclusions

- Power laws and power-law like distributions appear often
- (fractals/self similarity -> power laws)
- Exponentiation/inversion
- Yule process / CRP / rich get richer
- Criticality/percolation/phase transitions
- Fragmentation -> lognormal ~ P.L.
