CMU SCS

Outline

Goal: 'Find similar / interesting things'

- Intro to DB
- ➔ • Indexing - similarity search
- Data Mining

15-826 Copyright: C. Faloutsos (2009) 4

CMU SCS

Indexing - Detailed outline

- primary key indexing
- secondary key / multi-key indexing
- spatial access methods
 - z-ordering
 - R-trees
 - misc
- ➔ • fractals
 - intro
 - applications
- text

15-826 Copyright: C. Faloutsos (2009) 5

CMU SCS

Indexing - Detailed outline

- fractals
 - intro
 - applications
 - disk accesses for R-trees (range queries)
 - dimensionality reduction
 - selectivity in M-trees
 - dim. curse revisited
- ➔ • "fat fractals"
- quad-tree analysis [Gaede+]
- nn queries [Belussi+]

 CMU SCS

'Fat' fractals & R-tree performance on region data

- Problem [Proietti+, '99]
- Given
 - N (# of data regions)
- estimate how many of them will qualify for the average range query ($q_1 \times q_2 \times \dots \times q_E$)

Of course, we need more info
Q: what?

15-826 Copyright: C. Faloutsos (2009) 7

 CMU SCS

R-tree performance on region data

A: the distributions of their sizes

Q: do we also need some info about the locations?

15-826 Copyright: C. Faloutsos (2009) 8

 CMU SCS

R-tree performance on region data

A: the distributions of their sizes

Q: do we also need some info about the locations?

A: no (not for range queries)

15-826 Copyright: C. Faloutsos (2009) 9

CMU SCS

R-tree performance on region data

A: the distributions of their sizes

Q: what exactly would we need?

15-826 Copyright: C. Faloutsos (2009) 10

CMU SCS

R-tree performance on region data

A: the distributions of their sizes

Q: what exactly would we need?

A: for self-similar regions (~ 'fat' fractals), we just need the slope of the Korcak law! (and the total area) [Proietti+]

15-826 Copyright: C. Faloutsos (2009) 11

CMU SCS

More power laws: areas – Korcak's law

Scandinavian lakes
Any pattern?

15-826 Copyright: C. Faloutsos (2009) 12

CMU SCS

More power laws: areas – Korcak’s law

$\log(\text{count}(\geq \text{area}))$

Scandinavian lakes
area vs
complementary
cumulative count
(log-log axes)

$\log(\text{area})$

CMU SCS

R-tree performance on regions

- Once we know 'B' (and the total area)
- we can second-guess the individual sizes
- and then apply the [Pagel+93] formula
- Bottom line:

15-826 Copyright: C. Faloutsos (2009) 16

CMU SCS

R-tree performance on regions

Dataset	N	A	B
LAKES	816	75,910	0.85
ISLANDS	470	136,893	0.60
REGIONS	757	190,526	0.70

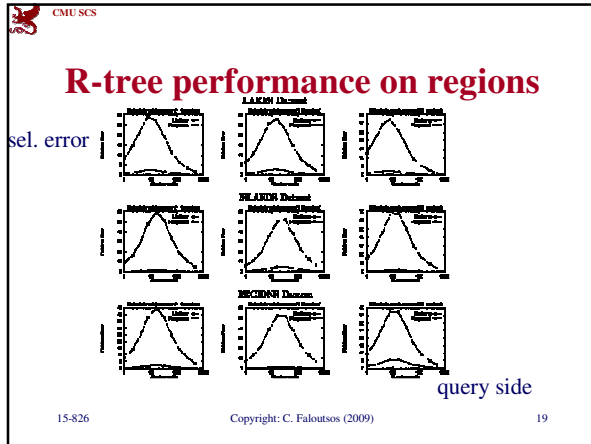

15-826 Copyright: C. Faloutsos (2009) 17

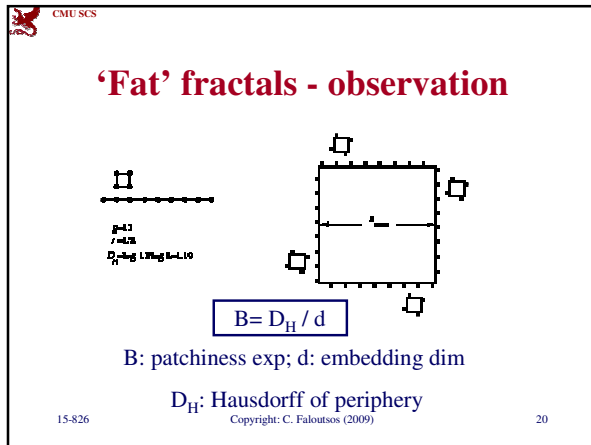

CMU SCS

R-tree performance on regions

Dataset	N	A	B
LAKES	816	75,910	0.85
ISLANDS	470	136,893	0.60
REGIONS	757	190,526	0.70

CMU SCS

‘Fat’ fractals

- intuition behind $B = D_H / d$?
- A: consider ‘flooding’:

15-826 Copyright: C. Faloutsos (2009) 24

CMU SCS

Conclusions

- ‘Fat’ fractals model regions well
- patchiness exp.: $B = D_H / d$
- can help us estimate selectivities

15-826 Copyright: C. Faloutsos (2009) 25

CMU SCS

Indexing - Detailed outline

- fractals

Fractals and Quadtrees

○ white

◐ gray

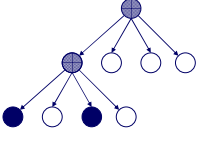

● black

15-826 Copyright: C. Faloutsos (2009) 32

CMU SCS

Fractals and Quadtrees

Let $p_g(i)$ the prob. to find a gray node at level i .
 If self-similar, what can we say for $p_g(i)$?

15-826 Copyright: C. Faloutsos (2009) 33

CMU SCS

Fractals and Quadrees

Let $p_g(i)$ the prob. to find a gray node at level i .
 If self-similar, what can we say for $p_g(i)$?

A: $p_g(i) = p_g = \text{constant}$

15-826 Copyright: C. Faloutsos (2009) 34

CMU SCS

Fractals and Quadrees

Assume only 'gray' and 'white' nodes (ie., no volume')
 Assume that p_g is given - how many gray nodes at level i ?

15-826 Copyright: C. Faloutsos (2009) 35

CMU SCS

Fractals and Quadrees

Assume only 'gray' and 'white' nodes (ie., no volume')
 Assume that p_g is given - how many gray nodes at level i ?

A: 1 at level 0;
 $4 * p_g$
 $(4 * p_g) * (4 * p_g)$
 ...
 $(4 * p_g)^i$

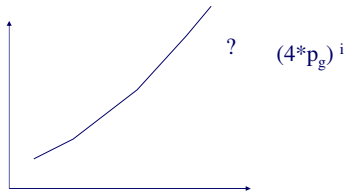

15-826 Copyright: C. Faloutsos (2009) 36

CMU SCS

Fractals and Quadrees

- I.e.:

of quadtree 'blocks'

? $(4 * p_g)^i$

level of quadtree

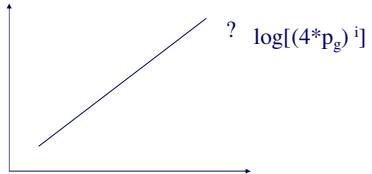

15-826 Copyright: C. Faloutsos (2009) 37

CMU SCS

Fractals and Quadrees

- I.e.:

$\log(\# \text{ of quadtree 'blocks'})$

? $\log[(4 * p_g)^i]$

level of quadtree

CMU SCS

Fractals and Quadrees

- Final observation: relationship between p_g and fractal dimension?

15-826 Copyright: C. Faloutsos (2009) 43

CMU SCS

Fractals and Quadrees

- Final observation: relationship between p_g and fractal dimension?
- A: very close:
 $(4 * p_g)^i = \#$ of gray nodes at level $i =$
 $\#$ of Hausdorff grid-cells of side $(1/2)^i = r$
 Eventually: $D_H = 2 + \log_2(p_g)$
 and, for E-d spaces: $D_H = E + \log_2(p_g)$

15-826 Copyright: C. Faloutsos (2009) 44

CMU SCS

Fractals and Quadrees

for E-d spaces: $D_H = E + \log_2(p_g)$
 Sanity check:

- point: $D_H = 0$ $p_g = ??$
- line in 2-d: $D_H = 1$ $p_g = ??$
- plane in 2-d: $D_H = 2$ $p_g = ??$

15-826 Copyright: C. Faloutsos (2009) 45

CMU SCS

Fractals and Quadtrees

Final conclusions:

- self-similarity leads to estimates for # of z-values = # of quadtree/oct-tree blocks
- close dependence on the Hausdorff fractal dimension of the boundary

NN queries

- Q: in NN queries, what is the effect of the shape of the query region? [Belussi+95]

15-826 Copyright: C. Faloutsos (2009) 48

CMU SCS

NN queries

- Q: in NN queries, what is the effect of the shape of the query region?
- that is, for L2, and self-similar data:

$\log(\#pairs\text{-within}(\leq d))$

r L_2

D_2

$\log(d)$

15-826 Copyright: C. Faloutsos (2009) 49

CMU SCS

NN queries

- Q: What about L_1 , L_{inf} ?

$\log(\#pairs\text{-within}(\leq d))$

r L_2

D_2

$\log(d)$

15-826 Copyright: C. Faloutsos (2009) 50

CMU SCS

NN queries

- Q: What about L_1 , L_{inf} ?
- A: Same slope, different intercept

$\log(\#pairs\text{-within}(\leq d))$

r L_2

D_2

$\log(d)$

15-826 Copyright: C. Faloutsos (2009) 51

CMU SCS

NN queries

- Q: What about L_1 , L_{inf} ?
- A: **Same slope**, different intercept

$SLEWQ(queries) = 1.98 SLEWQ(circles) = 1.98 SLEWQ(squares) = 1.98$

log(#neighbors)

log(d)

15-826 Copyright: C. Faloutsos (2009) 52

CMU SCS

CMU SCS

Fractals - overall conclusions

- self-similar datasets: appear often
- powerful tools: correlation integral, NCDF, rank-frequency plot
- intrinsic/fractal dimension helps in
 - estimations (selectivities, quadtrees, etc)
 - dim. reduction / dim. curse
- (later: can help in image compression...)
