

**15-826: Multimedia Databases
and Data Mining**

Lecture#1: Introduction
Christos Faloutsos

Outline

Goal: 'Find similar / interesting things'

- Intro to DB
- Indexing - similarity search
- Data Mining

Problem

Given a large collection of (multimedia) records, find similar/interesting things, ie:

- Allow fast, approximate queries, and
- Find rules/patterns

CMU SCS

Sample queries

- Similarity search
 - Find pairs of branches with similar sales patterns
 - find medical cases similar to Smith's
 - Find pairs of sensor series that move in sync
 - Find shapes like a spark-plug
 - (nn: 'case based reasoning')

CMU SCS

Sample queries –cont'd

- Rule discovery
 - Clusters (of branches; of sensor data; ...)
 - Forecasting (total sales for next year?)
 - Outliers (eg., unexpected part failures; fraud detection)

Intro to DB

- Relational DBMS - what and why?
 - inserting, retrieving and summarizing data
 - views; security/privacy
 - (concurrency control and recovery)
- Object-Relational DBMS - what and why?

CMU SCS

What is the goal of rel. DBMSs

Electronic record-keeping:
Fast and convenient access to information.
 Eg.: students, taking classes, obtaining grades;

- find my gpa
- <and other ad-hoc queries>

CMU SCS

Why Databases?

15-826 Copyright: C. Faloutsos (2010) 10

CMU SCS

Why Databases?

- Flexibility
- data independence (can add new tables; new attributes)
- data sharing/concurrency control
- recovery

15-826 Copyright: C. Faloutsos (2010) 11

CMU SCS

Why NOT Databases?

15-826 Copyright: C. Faloutsos (2010) 12

CMU SCS

Why NOT Databases?

- Price
- additional expertise (SQL/DBA)
- over-kill for small data sets

How do DBs work?

We use `sqlite3` as an example, from <http://www.sqlite.org>

15-826 Copyright: C. Faloutsos (2010) 16

CMU SCS

How do DBs work?

```
%sqlite3 mydb # mydb: file
sql>create table student (
  ssn fixed;
  name char(20) );
```

student	
ssn	name

15-826 Copyright: C. Faloutsos (2010) 17

CMU SCS

How do DBs work?

```
sql>insert into student
  values (123, "Smith");
sql>select * from student;
```

student	
ssn	name
123	Smith

CMU SCS

How do DBs work?

sql>create table takes (
 ssn fixed,
 c_id char(5),
 grade fixed));

takes		
ssn	c_id	grade

CMU SCS

How do DBs work - cont'd

More than one tables - joins
 Eg., roster (names only) for 15-826

student	
ssn	name

takes		
ssn	c_id	grade

How do DBs work - cont'd

sql> select name
 from student, takes
 where student.ssn = takes.ssn
 and takes.c_id = "15826"

SQL-DML

General form:

```

select a1, a2, ... an
from r1, r2, ... rm
where P
[order by ...]
[group by ...]
[having ...]

Views - what and why?

- suppose you ONLY want to see ssn and GPA (eg., in your data-warehouse)
- suppose secy is only allowed to see GPAs, but not individual grades
- -> VIEWS!

Why more than RDBMSs?

- RDBMS: tuples, of numbers + strings
- What apps need only those?

CMU SCS

Why more than RDBMSs?

- RDBMS: tuples, of numbers + strings
- What apps need only those?
 - Banks
 - Airlines
 - Retailer stores
 - ...
- Q: Other apps, with more req's?

CMU SCS

Why more than RDBMS's

- Q: Other apps, with more req's?
- A:
 - text
 - multimedia; financial apps/forecasting
 - Geographic Inf. Sys.
 - CAD/CAM
 - Network management

Ideally, we'd like to:

- create a new data type (eg., 'image', 'time-sequence')
- define functions on it (like `dist(im1, im2)`)
- be able to ask queries like

```
select * from employee
where dist(employee.face, given-face) <= 10;
```

OR DBMSs

traditional DBMS + attempts to provide

- user defined data types
- support for large / complex objects
- (inheritance - ISA hierarchies)

15-826 Copyright: C. Faloutsos (2010) 40

CMU SCS

SQL-3 extensions

- complex types (sets, lists, multisets)
- inheritance (IS-A hierarchies)
- User Defined Functions (UDFs)

15-826 Copyright: C. Faloutsos (2010) 41

CMU SCS

Complex types Sample syntax

eg,
`create type MyDate (
 day decimal(2),
 month char(3),
 year decimal (4)
);`

15-826 Copyright: C. Faloutsos (2010) 42

CMU SCS

BLOBs etc:

- Large objects, eg., video, images, 3d-MRI scans
- new data types: LOB (=Large Object)
 - BLOB: (up to 4Gb; binary: jpeg, mpeg, ...)
 - CLOB: (up to 2Gb; character: english text)
 - NCLOB:(.....; multi-byte characters)

15-826 Copyright: C. Faloutsos (2010) 43

CMU SCS

Stored procedures Sample syntax

```
SQL> create or replace procedure del-st-rec
(s-id number) as
begin
  delete from student
  where s-id = ssn;
end del-st-rec;
SQL> execute del-st-rec ( 123 );
```

Conclusions

- (relational) DBMSs: electronic record keepers
- customize them with **create table** commands
- ask SQL queries to retrieve info

15-826 Copyright: C. Faloutsos (2010) 45

CMU SCS

Conclusions cont'd

main advantages over flat files & scripts:

- logical + physical data independence (ie., flexibility of adding new attributes, new tables and indices)
- concurrency control and recovery for free

15-826 Copyright: C. Faloutsos (2010) 46

CMU SCS

Conclusions cont'd

- OR-DBMS: user-defined data types (eg., images), and U.D. functions.
