CMU SCS

**Database Design**

- Requirements Analysis
- Conceptual Design
- Logical Design
- Schema Refinement
- Physical Design
- Security Design

Faloutsos CMU SCS 15-415 2

---

---

---

---

---

---

---

CMU SCS

**Database Design**

• Requirements Analysis	user's needs
• <b>Conceptual Design</b>	high level (ER)
• Logical Design	Tables
• Schema Refinement	Normalization
• Physical Design	Indices etc
• Security Design	Access controls

CMU SCS

## Overview

- concepts

➔

- Entities
- Relationships
- Attributes
- Specialization/Generalization
- Aggregation
- ER modeling questions

Faloutsos CMU SCS 15-415 4

---

---

---

---

---

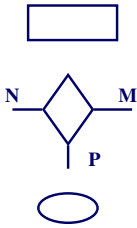

---

---

---

CMU SCS

## Tools

**Entities ('entity sets')**

**Relationships ('rel. sets')  
and mapping constraints**

**attributes**

Faloutsos CMU SCS 15-415 5

---

---

---

---

---

---

---

---

CMU SCS

## Example

Students, taking courses, offered by  
instructors; a course may have multiple  
sections; one instructor per section

nouns -> entity sets  
verbs -> relationship sets

Faloutsos CMU SCS 15-415 6

CMU SCS

## Weak entities

- ‘weak’ entities: if they need to borrow a unique id from a ‘strong entity’ - **thick** box.
- ‘c-id’ + ‘s-id’: unique id for SECTION
- **partial key** (eg., ‘s-id’) - dashed underline
- **identifying relationship** (eg., ‘has’)

Faloutsos CMU SCS 15-415 22

---

---

---

---

---

---

---

---

CMU SCS

## More details

- self-relationships - example?

Faloutsos CMU SCS 15-415 23

---

---

---

---

---

---

---

---

CMU SCS

## More details

- self-relationships - example?

Faloutsos CMU SCS 15-415 24

---

---

---

---

---

---

---

---

CMU SCS

## More details

- 3-way and k-way relationships?

Faloutsos CMU SCS 15-415 25

---

---

---

---

---

---

---

CMU SCS

## More details

- 3-way and k-way relationships? Rare, but possible:

```
graph LR; EMPLOYEE[N] --- uses{uses}; TOOL[M] --- uses; PROJECT[P] --- uses
```

Faloutsos CMU SCS 15-415 26

---

---

---

---

---

---

---

CMU SCS

## Overview

- concepts
  - Entities
  - Relationships
  - ➔ – Attributes
  - Specialization/Generalization
  - Aggregation
  - ER modeling questions

Faloutsos CMU SCS 15-415 27

---

---

---

---

---

---

---

CMU SCS

## More details - attributes

- **key** (or **primary key**): unique identifier
- underlined, in the ER diagram
- [not in textbook - FYI:
  - **multivalued** or set-valued attributes (eg., 'dependents' for EMPLOYEE)
  - **derived** attributes (eg., 15% tip)

Faloutsos CMU SCS 15-415 28

---

---

---

---

---

---

---

---

CMU SCS

## Overview

- concepts
  - Entities
  - Relationships
  - Attributes
  - ➔ – Specialization/Generalization
  - Aggregation
  - ER modeling questions

Faloutsos CMU SCS 15-415 29

---

---

---

---

---

---

---

---

CMU SCS

## Specialization

- eg., students: part time (#credit-hours) and full time (major)

```

graph TD
    STUDENT[STUDENT] --- name((name))
    STUDENT --- ssn((ssn))
    STUDENT -- IS-A --> FT_STUDENT[FT-STUDENT]
    STUDENT -- IS-A --> PT_STUDENT[PT-STUDENT]
    FT_STUDENT --- major((major))
    PT_STUDENT --- credits((#credits))
  
```

Faloutsos CMU SCS 15-415 30

---

---

---

---

---

---

---

---

 CMU SCS

## Observations

- Generalization: exact reverse of ‘specialization’
- attribute inheritance
- could have **many** levels of an IS-A hierarchy

Faloutsos CMU SCS 15-415 31

---

---

---

---

---

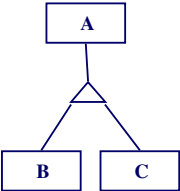

---

---

 CMU SCS

## More details

- Overlap constraints
- Covering constraints

Faloutsos CMU SCS 15-415 32

---

---

---

---

---

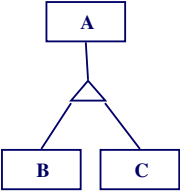

---

---

 CMU SCS

## More details

- Overlap constraints
  - can an entity belong to both ‘B’ and ‘C’?
- Covering constraints
  - can an ‘A’ entity belong to neither ‘B’ nor ‘C’?

Faloutsos CMU SCS 15-415 33

---

---

---

---

---

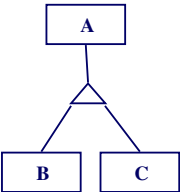

---

---

CMU SCS

## More details

- Overlap constraints - examples?

Faloutsos CMU SCS 15-415 34

---

---

---

---

---

---

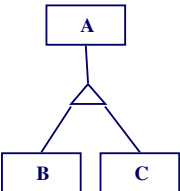

---

---

CMU SCS

## More details

- Covering constraints - examples?

Faloutsos CMU SCS 15-415 35

---

---

---

---

---

---

---

---

CMU SCS

## Overview

- concepts
  - Entities
  - Relationships
  - Attributes
  - Specialization/Generalization
  - ➔ – Aggregation
  - ER modeling questions

Faloutsos CMU SCS 15-415 36

---

---

---

---

---

---

---

---

CMU SCS

## Aggregation

- computer model (w/ CPU and HD)
- and Maker (eg., Dell, HP)

Faloutsos CMU SCS 15-415 37

---

---

---

---

---

---

---

---

CMU SCS

## Aggregation

- treat a relationship as an entity
- used to express a relationship among relationships

Faloutsos CMU SCS 15-415 38

---

---

---

---

---

---

---

---

CMU SCS

## Overview

- concepts
  - Entities
  - Relationships
  - Attributes
  - Specialization/Generalization
  - Aggregation
  - ➔ – ER modeling questions

Faloutsos CMU SCS 15-415 39

---

---

---

---

---

---

---

---

CMU SCS

## Conceptual design

- Entity vs attribute
- Entity vs relationship
- Binary or ternary relationships?
- Aggregation?

Faloutsos CMU SCS 15-415 40

---

---

---

---

---

---

---

CMU SCS

## Entity vs. attribute

- Entity EMPLOYEE (w/ emp#, name, job\_code, ...)
- Q: How about 'spouse' - entity or attribute?
- Q: How about 'dependents'?

Faloutsos CMU SCS 15-415 41

---

---

---

---

---

---

---

CMU SCS

## Entity vs. attribute

- Entity EMPLOYEE (w/ emp#, name, job\_code, ...)
- Q: How about 'spouse' - entity or attribute?
- A: probably, 'attribute' is enough
- Q: How about 'dependents'?
- A: Entity - we may have many dependents

Faloutsos CMU SCS 15-415 42

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

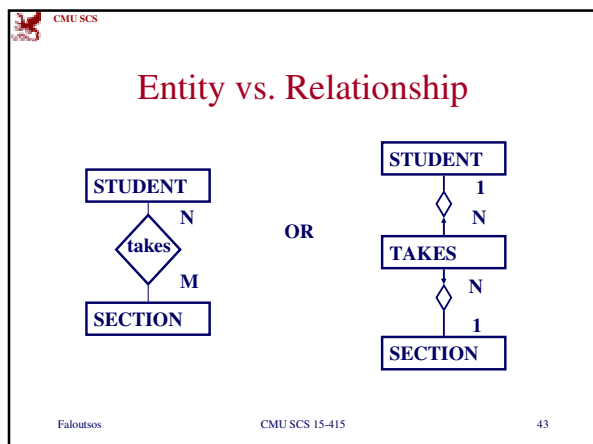

---

---

---

---

---

---

---

---

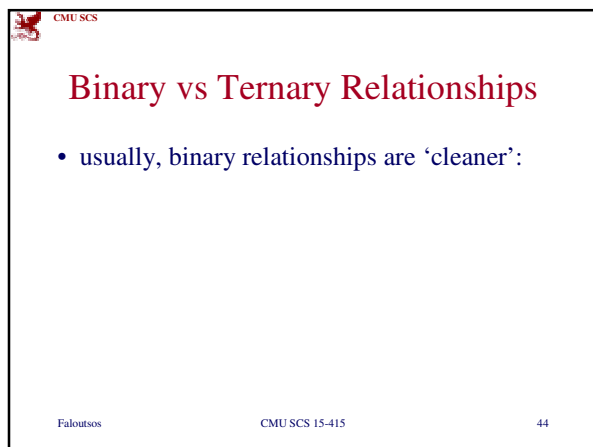

---

---

---

---

---

---

---

---

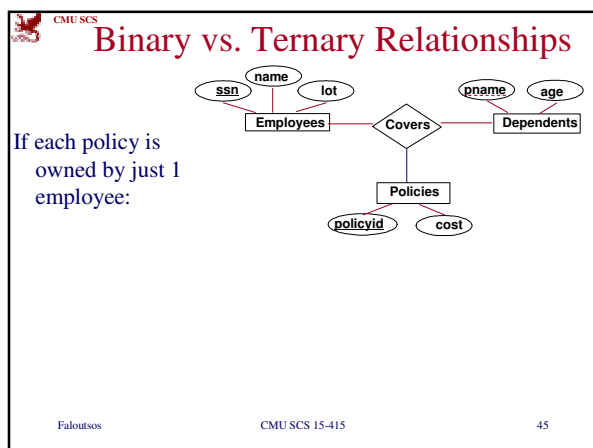

---

---

---

---

---

---

CMU SCS

## Binary vs Ternary Rel.

- But sometimes ternary rel. can not be replaced by a set of binary rel's:

Faloutsos CMU SCS 15-415 49

---

---

---

---

---

---

---

---

CMU SCS

## Binary vs. Ternary Relationships (Contd.)

The diagram shows a ternary relationship 'Contract' (diamond) connected to three entities: 'Parts' (rectangle), 'Suppliers' (rectangle), and 'Departments' (rectangle). A quantity 'qty' (oval) is associated with the 'Contract' relationship. This is compared (vs.) to two binary relationships: 'can-supply' (diamond) between 'Parts' and 'Suppliers', and 'deals-with' (diamond) between 'Suppliers' and 'Departments'.

**why is it bad?**

Faloutsos CMU SCS 15-415 50

---

---

---

---

---

---

---

---

CMU SCS

## Binary vs. Ternary Relationships (Contd.)

The diagram shows the same ternary relationship 'Contract' as before. Below it, the two binary relationships 'can-supply' and 'deals-with' are shown but crossed out with a large red 'X'. This illustrates that the binary relationships do not fully capture the semantics of the ternary relationship.

- S “can-supply” P, D “needs” P, and D “deals-with” S does not imply that D has agreed to buy P from S.
- How do we record *qty*?

Faloutsos CMU SCS 15-415 51

---

---

---

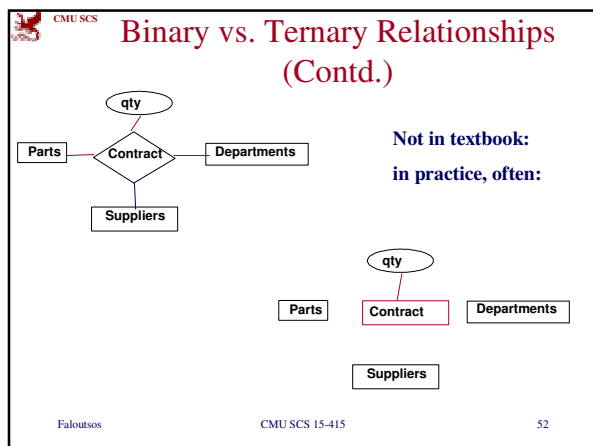

---

---

---

---

CMU SCS

## Summary

- E-R Diagrams: a powerful, user-friendly tool for data modeling:
  - Entities (strong, weak)
  - Attributes (primary keys, discriminators, derived, multivalued)
  - Relationships (1:1, 1:N, N:M; multi-way)
  - Generalization/Specialization; Aggregation

Faloutsos CMU SCS 15-415 55
