restaurant

coffee shop

Using Attributes

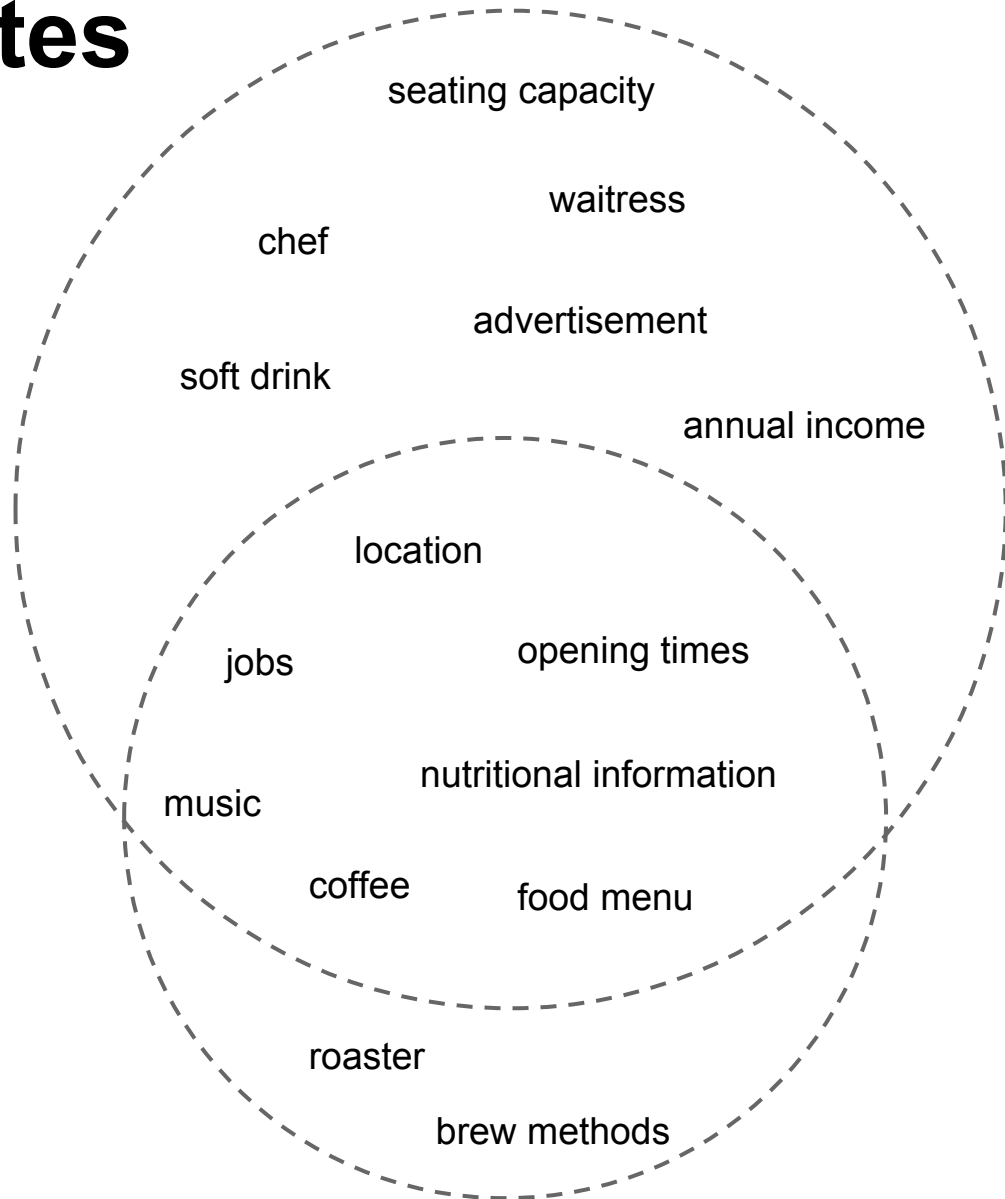

restaurant

coffee shop

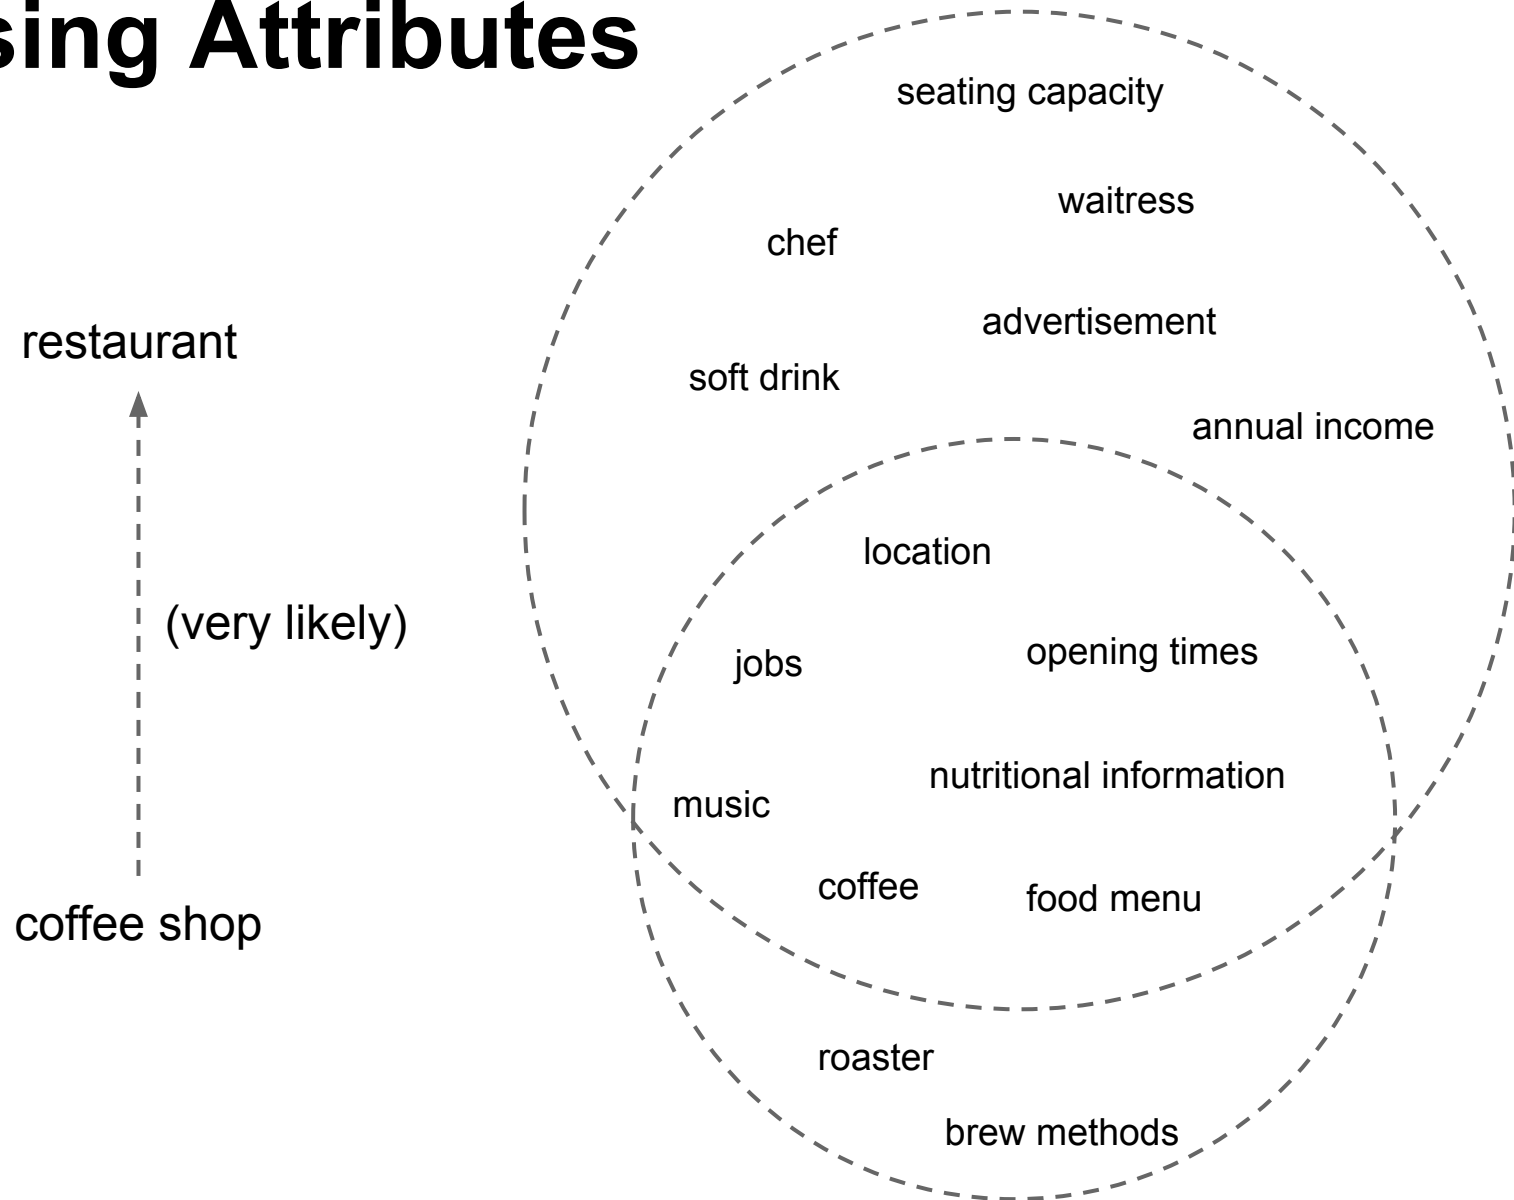

Using Attributes

Biperpedia [VLDB 14]

- Mines thousands of attributes for every concept from search queries and Web text
 - > 2 orders of magnitude larger than Freebase
 - Attributes ranked around 100K for country:
surveillance authorities, aerospace experts, antitrust chief, human resources firm, airport owner, ...
- Also identifies synonyms and mis-spells
 - *tourist attraction = tourist spot*
 - *moter: mother or motor (depending on Person or Car)*

Attribute Features

- Basic Features
 - How “similar” are the concepts?
 - How “specialized” is one concept to another?
- Variants
 - Different weights for attributes
 - frequency, instances, rank
 - Synonym-based attribute matching

Experimental Setting

- Sources of concepts
 - Is-A Network (47K)
 - Apply patterns (e.g., 'X is a Y', 'Y such as X') on the Web
 - Discard nodes with fewer than 10 children
 - Freebase (10K)
- Training on Is-A Network concepts
 - 5.6K manually-labeled subsumption relations
 - Agreement among (three) experts was low: 74%

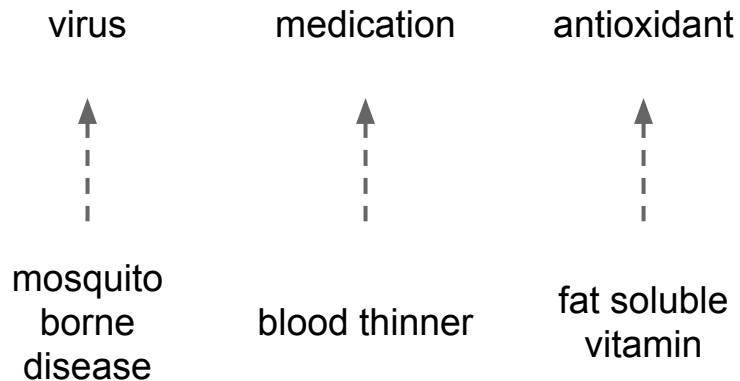

Large-scale Prediction

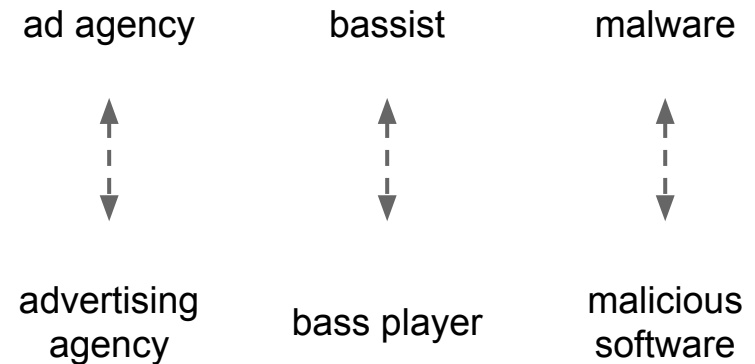

2.4M predicted relations

Top-k Samples:	100	1K	10K	100K
Estimated Precision:	1	0.94	0.72	0.68

Directional Predictions

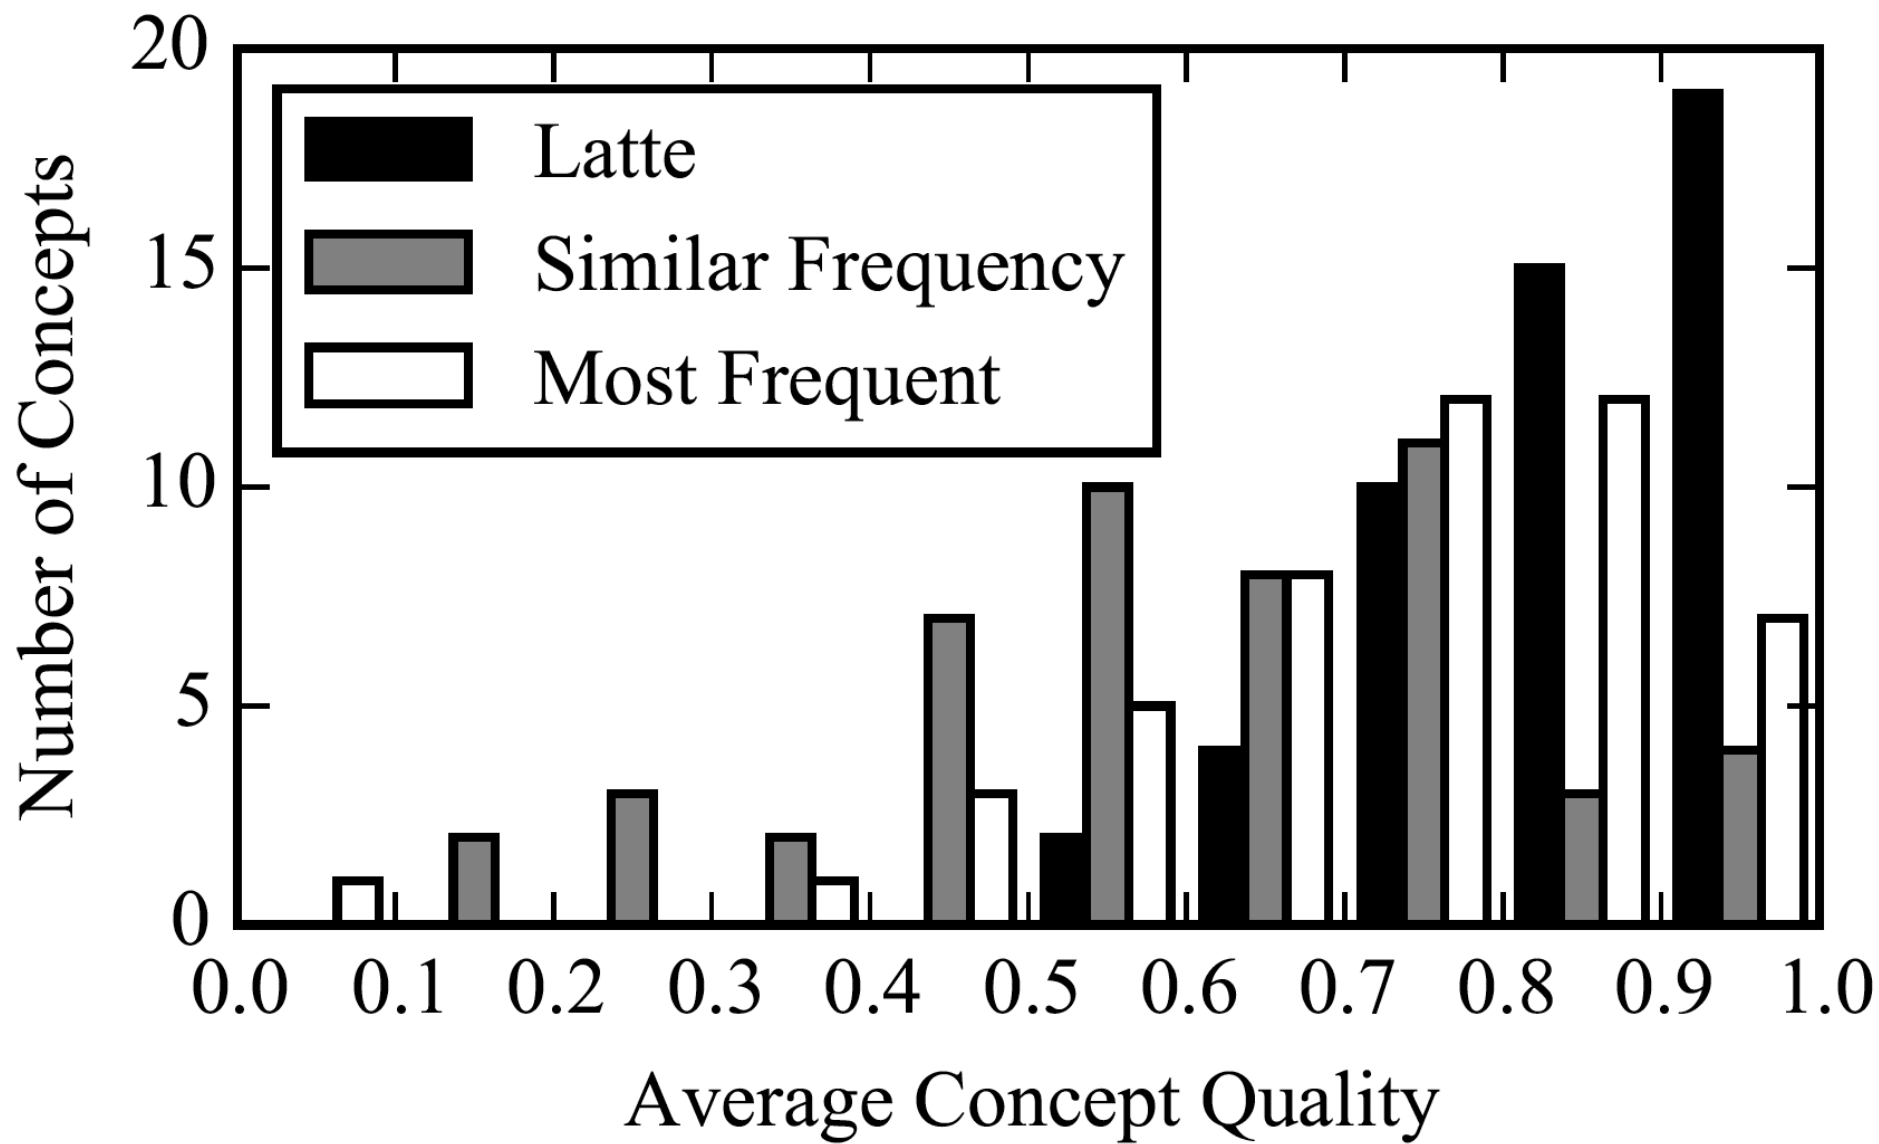

Bi-Directional Predictions (synonyms)

Finding High-Quality Concepts

- Intuition: concepts with many strong signals (i.e., subsumption relations) are likely to be of high quality
- Compare
 - **Latte**: 50 most frequent concepts among top 1K predictions
 - Is-A Network (**Similar Frequency**): 50 concepts with similar frequencies of Is-A relations
 - Is-A Network (**Most Frequent**): 50 most frequent concepts

Concluding Observations

- Latte finds latent subsumptions that are useful for search engines using attributes
 - Is-A Network: 0.74 F1 / 2.4M predictions
 - Freebase: 0.98 F1 / 734 predictions
- Can also be used to clean resources with noisy concepts
- Challenge: What is the real notion of subsumption for Web applications?
