106 Holmes Place
Pittsburgh, PA 15213
(412) 687–8877

Research Interests Multiagent learning, multiagent planning, game theory, competitive and cooperative multiagent systems, reinforcement learning, machine learning, mobile robots, and computer game environments.

Education Ph.D. candidate, Computer Science, **Carnegie Mellon University** 1997–Present
Advisor: Professor Manuela Veloso

I am investigating the problem of learning behavior in stochastic multiagent environments. Specifically, I am examining the problem of learning in the presence of agents that have limited capabilities, physical or rational. I have developed a rational and convergent multiagent learning technique that is capable of exploiting limited opponents and compensating for limited teammates. This technique has also been combined with approximate reinforcement learning solutions and applied to domains with intractably large state spaces, including an adversarial robot task. Expected completion: February 2003.

M.Sc., Computer Science **Carnegie Mellon University** December 1999

B.S., Math and Computer Science, **Carnegie Mellon University** 1996
University Honors

Honors IJCAI Excellent Paper Spring 2001
Conference paper entitled “Rational and Convergent Learning in Stochastic Games” invited as a fast-track submission to *Artificial Intelligence*.

Allen Newell Medal for Research Excellence Fall 1998

RoboCup-98 Robot Soccer Champion Team Summer 1998
Small-size robot league.

EDS Academic Excellence Award Spring 1995

Research Experience **CMUnited and CMDragons RoboCup Teams** 1998,1999,2001,2002
Team Member and Leader. Developed a team of robots that competed in the small-size league of RoboCup, an international, fully autonomous, robot soccer competition. Served as team leader in 1998, 1999, and 2001. Developed novel algorithms for fast real-time motion control and path-planning, Kalman-based tracking and prediction, and individual and team behavior architectures. We were league champions in 1998 and reached the quarter finals in 1999 and 2002. In 2002, we were the first known RoboCup robot team to employ any form of online adaptation, which we used to effectively select team plans.

Kitano Symbiotic Systems Project, Tokyo, Japan Summer 2000
Visiting Researcher. Worked on the development of a generic urban disaster simulation environment as a testbed for multiagent technologies. Work focused on creating a flexible kit to simplify agent development and a number of presentations promoting the new area of research.

Digital Mapping Laboratory, CMU, Pittsburgh, PA 1994–1997
Undergraduate Researcher. Developed new automatic and semi-automatic techniques for extracting road data from aerial imagery. Work included improving visualization techniques, as well as incorporating photogrammetric data to improve the accuracy of the extracted road network.

B & W Research Center, Alliance, OH Summer 1994
Internship. Performed various tasks, including software support, developing networking tools, and assisting the creation and maintenance of a software sharing system on a large computer network.

Invited Presentations

“Learning, Equilibria, Limitations, and Robots”. NIPS Workshop on Multiagent Learning, December 2002. Vancouver, Canada.

“Plan-Based Adaptation for Control of Robotic Agents”. Dagstuhl Seminar on Plan-based Control of Robotic Agents, October 2001. Schloss Dagstuhl, Germany.

“Multiagent Learning in the Presence of Agents with Realistic Limitations”. IJCAI Doctoral Consortium, August 2001. Seattle, WA.

“Rational Learning of Mixed Equilibria in Stochastic Games”. Beyond MDPs: Uncertainty in Artificial Intelligence 2000 Workshop, June 2000. Stanford University.

“A Parallel Between Multiagent Reinforcement Learning and Stochastic Game Theory”. 1999 New England Spring Symposium on Reinforcement Learning, April 1999. Invited Presentation at University of Massachusetts, Amherst.

Other Presentations

“Approximation Techniques in Multiagent Learning”, Poster at Symposium on Abstraction, Reformulation, and Approximation, Kananaskis, Canada, 2002.

“Can Multiagent Learning Scale?”, University of Toronto, June, 2002.

“How Engineers Think?”, Graduate Christian Fellowship, Carnegie Mellon University, October, 2001.

“Multiagent Reinforcement Learning using a Variable Learning Rate”, Student Seminar Series, Carnegie Mellon University, October 2000.

Teaching Experience

15-889: Multiagent Systems, Theory and Practice Spring 2001
Designed and taught with Prof. Manuela Veloso and Dr. Gal Kaminka.

15-451: Algorithms Fall 2000
Teaching assistant for Prof. Avrim Blum.

15-889: Planning, Execution, and Learning Spring 1999
Guest lecturer.

15-211: Fundamental Structures of Computer Science I Fall 1998
Teaching assistant for Prof. Seth Goldstein.

Service and Outreach

IJCAI Tutorial Speaker Summer 2003
Forthcoming tutorial on “Multiagent Learning: A Game Theoretic Perspective.” Joint presentation with Prof. Michael Littman.

Workshop Co-Chair Summer 2002
Workshop on Agents in Computer Games. Computers and Games, Edmonton, Alberta. Co-chaired with Regis Vincent.

Special Session Coordinator 2003
Special session on “Multiagent Learning” at the RoboCup Symposium.

Program Committee Member
Conference on Autonomous Agents and Multiagent Systems (AAMAS) 2002
International Conference on Machine Learning (ICML) 2002
AAMAS Workshop on Game Theoretic and Decision Theoretic Planning 2003
RoboCup Symposium 2000, 2002, 2003

Reviewer 1998–Present
Artificial Intelligence Journal (AIJ)
Journal of Artificial Intelligence Research (JAIR)
Journal of Machine Learning Research (JMLR)
Complex Systems
International Joint Conference of Artificial Intelligence (IJCAI)
International Conference on AI Planning and Scheduling (AIPS)
Neural Information Processing Systems (NIPS)
International Conference on Machine Learning (ICML)
International Conference on Autonomous Agents
IEEE International Conference on Robotics and Automation (ICRA)
AAAI Spring Symposium on Collaborative Learning Agents

Competition Organizer Spring 2003
Small-size robot competition organizer for the upcoming first RoboCup American Open.

Organizing Committee 2001–Present
RoboCup special interest group on multiagent learning.

Head Referee 2000–2001
Head referee for the RoboCup small-size league. Overseeing all of the referees and responsible for the semi-finals and finals.

School Assembly Spring 2001
Presentation and demonstration of robotics at Minadeo Elementary School, Pittsburgh.

Botball (KISS Institute) Spring 2000
Organizer for a regional high school and middle school robotics competition to foster interest in mathematics, engineering, and computers.

	Tutor	1997 – 1999
	Worked with <i>Urban Impact Foundation</i> targeting at-risk inner-city youth.	
Code Released	CMDragons'02 Small-Size Robot Team	Summer 2002
	The source code for the entire system was made available, including modules for vision, tracking, motion control, behavior execution, play-based team coordination, a simulator, graphical user interface, and utilities.	
	RoboCup Rescue ADK	Summer 2000
	The ADK is a package for simplifying the development of agents for the RoboCup Rescue disaster mitigation simulator. It simplifies agent-kernel and agent-agent communication protocols, provides a complete world model, and defines basic tools for agent navigation and reasoning.
