# **Guidelines for Submissions to ICS 2016**

#### **Abstract**

This document is intended to serve as a sample for submissions to the International Conference on Supercomputing (ICS), 2016. We provide some guidelines that authors should follow when submitting their papers to the conference.

### 1. Introduction

This document provides the formatting instructions for submissions to the International Conference on Supercomputing, 2016. In an effort to respect the efforts of reviewers and in the interest of fairness to all prospective authors, we request that all submissions to ICS-2016 follow the formatting and submission rules detailed below. Submissions that (grossly) violate these instructions may not be reviewed, at the discretion of the program co-chairs, in order to maintain a review process that is fair to all potential authors.

An example submission (formatted using the ICS-2016 submission format) that contains the submission and formatting guidelines can be downloaded from Sample PDF. The contents of this document are the same as the contents of the submission instructions that appear on Submission Page (this webpage).

All questions regarding paper formatting and submission should be directed to the program chair.

### 1.1. Format Highlights

- Paper must be submitted in printable PDF format.
- Text must be in a minimum 10pt (not 9pt) font.
- Papers must be at most 11 pages, not including references.
- No page limit for references.
- References must include complete author lists to facilitate the reviewing process (no et al.).

### 1.2. Paper Evaluation Objectives

The committee will make every effort to judge each submitted paper on its own merits. There will be no target acceptance rate. We expect to accept a wide range of papers with appropriate expectations for evaluation—while papers that build on significant past work with strong evaluations are valuable, papers that open new areas with less rigorous evaluation are equally welcome and especially encouraged. Given the wide range of topics covered by ICS, every effort will be made to find expert reviewers.

# 2. Paper Preparation Instructions

# 2.1. Paper Formatting

Papers must be submitted in PDF format and should contain a maximum of 11 pages of single-spaced two-column text, not including references. You may include any number of pages for references, but see below for more instructions. If you are using LATEX [1] to typeset your paper, then we recommend that you use the template available at ICS-2016 Latex Template. (This document was prepared with that template.) If you use a different software package to typeset your paper, then please adhere to the guidelines mentioned in Table 1.

Field	Value
Page limit	11 pages (excluding references)
Paper size	US Letter (8.5in x 11.in)
Top margin	1in
Bottom margin	1in
Left margin	0.75in
Right margin	0.75in
Body	2-column, single-spaced
Space between columns	0.25in
Body font	10pt
Abstract font	10pt (regular font)
Section heading font	12pt, bold
Subsection heading font	10pt, bold
Caption font	9pt (minimum), bold
References	8pt, no page limit

Table 1: Formatting guidelines for submission

Please ensure that you include page numbers with your submission. This makes it easier for the reviewers to refer to different parts of your paper when they provide comments. Please ensure that your submission has a banner at the top of

the title page, similar to this document, which contains the submission number and the notice of confidentiality. If using the template, just replace XXX with your submission number.

#### 2.2. Content

**Author List.** Reviewing will be double blind; therefore, please do not include any author names on any submitted documents except in the space provided on the submission form. You must also ensure that the metadata included in the PDF does not give away the authors. If you are improving upon your prior work, refer to your prior work in the third person and include a full citation for the work in the bibliography. For example, if you are building on your own prior work in the papers [2, 3, 4], you would say something like: "While the authors of [2, 3, 4] did X, Y, and Z, this paper additionally does W, and is therefore much better. Do NOT omit or anonymize references for blind review. There is one exception to this for your own prior work that appeared in IEEE CAL, workshops without archived proceedings, etc. as discussed later in this document.

**Figures and Tables.** Ensure that the figures and tables are legible. Please also ensure that you refer to your figures in the main text. Many reviewers print the papers in gray-scale. Therefore, if you use colors for your figures, ensure that the different colors are highly distinguishable in gray-scale.

**References.** There is no length limit for references. Each reference must explicitly list all authors of the paper. Papers not meeting this requirement will be rejected. Authors of NSF proposals should be familiar with this requirement. Knowing all authors of related work will help find the best reviewers. Since there is no length limit for the number of pages used for references, there is no need to save space here.

# 3. Paper Submission Instructions

# 3.1. Guidelines for Determining Authorship

IEEE guidelines dictate that authorship should be based on a **substantial intellectual contribution**. It is assumed that all authors have had a significant role in the creation of an article that bears their names. In particular, the authorship credit must be reserved only for individuals who have met each of the following conditions:

- 1. Made a significant intellectual contribution to the theoretical development, system or experimental design, prototype development, and/or the analysis and interpretation of data associated with the work contained in the article:
- Contributed to drafting the article or reviewing and/or revising it for intellectual content; and
- 3. Approved the final version of the article as accepted for publication, including references.

A detailed description of the IEEE authorship guidelines and responsibilities is available here. Per these guidelines, it is not acceptable to award honorary authorship or gift authorship. Please keep these guidelines in mind while determining the author list of your paper.

### 3.2. Declaring Authors

Declare all the authors of the paper upfront. Addition/removal of authors once the paper is accepted will have to be approved by the program chair, since it potentially undermines the goal of eliminating conflicts for reviewer assignment.

### 3.3. Areas and Topics

Authors should indicate these areas on the submission form as well as specific topics covered by the paper for optimal reviewer match. If you are unsure whether your paper falls within the scope of ICS, please check with the program chair ICS is a broad, multidisciplinary conference and encourages new topics.

# 3.4. Conflict Responsibilities

Authors must register all their conflicts on the paper submission site. Conflicts are needed to ensure appropriate assignment of reviewers. If a paper is found to have an undeclared conflict that causes a problem OR if a paper is found to declare false conflicts in order to abuse or game the review system, the paper may be rejected

We use the NSF conflict of interest (COI) guidelines for determining the conflict period for ICS-2016. Please declare a conflict of interest with the following people for any author of your paper:

- 1. Your Ph.D. advisor(s), post-doctoral advisor(s), Ph.D. students, and post-doctoral advisees, forever. Ph.D. advisor, post-doctoral advisor, and Ph.D. students.
- 2. Family relations by blood or marriage, or their equivalent, forever (if they might be potential reviewers).
- 3. People with whom you have collaborated in the last FOUR years, including
  - co-authors of accepted/rejected/pending papers.
  - co-PIs on accepted/rejected/pending grant proposals.
  - funders (decision-makers) of your research grants, and researchers whom you fund.
- 4. People (including students) who shared your primary institution(s) in the last FOUR years.

5. Other relationships, such as close personal friendship, that you think might tend to affect your judgment or be seen as doing so by a reasonable person familiar with the relationship.

Service collaborations such as co-authoring a report for a professional organization, serving on a program committee, or co-presenting tutorials, do not themselves create a conflict of interest. Co-authoring a paper that is a compendium of various projects with no true collaboration among the projects does not constitute a conflict among the authors of the different projects.

On the other hand, there may be others not covered by the above with whom you believe a COI exists, for example, an ongoing collaboration which has not yet resulted in the creation of a paper or proposal. Please report such COIs; however, you may be asked to justify them. Please be reasonable. For example, you cannot declare a COI with a reviewer just because that reviewer works on topics similar to or related to those in your paper. The PC Chair may contact co-authors to explain a COI whose origin is unclear.

We hope to draw most reviewers from the PC and the ERC, but others from the community may also write reviews. Please declare all your conflicts (not just restricted to the PC and ERC). When in doubt, contact the program chair.

### 3.5. Optional Reviewer Suggestions

Authors may optionally mark (non-conflicted) PC and ERC members that they believe could provide expert reviews for their submission. If authors believe there is insufficient expertise on the PC and ERC for the topic of their paper, they may suggest alternate reviewers. The program chair will use the authors input at his discretion. We provide this opportunity for input mostly for papers on non-traditional and emerging topics.

### 3.6. Concurrent Submissions and Workshops

By submitting a manuscript to ICS-2016, the authors guarantee that the manuscript has not been previously published or accepted for publication in a substantially similar form in any conference, journal, or the archived proceedings of a workshop (e.g., in the ACM digital library) see exceptions below. The authors also guarantee that no paper that contains significant overlap with the contributions of the submitted paper will be under review for any other conference or journal or an archived proceedings of a workshop during the ICS-2016 review period. Violation of any of these conditions will lead to rejection.

The only exceptions to the above rules are for the authors own papers in (1) workshops without archived proceedings such as in the ACM digital library (or where the authors chose not to have their paper appear in the archived proceedings), or (2) venues such as IEEE CAL where there is an explicit policy that such publication does not preclude longer conference submissions. In all such cases, the submitted manuscript may ignore the above work to preserve author anonymity. This information must, however, be provided on the submission form the PC chair will make this information available to reviewers if it becomes necessary to ensure a fair review. As always, if you are in doubt, it is best to contact the program chair.

Finally, we also note that the ACM Plagiarism Policy (http://www.acm.org/publications/policies/plagiarism\_policy) covers a range of ethical issues concerning the misrepresentation of other works or one's own work.
