There are four parts in an ABAS:
1. Problem Statement
2. Stimulus/Response measures
3. Architecture Style
4. Analysis

ABAS is a structured description of a measurable quality attribute, a particular architectural style, and the relevant qualitative and quantitative analysis techniques.

Example: Cancel ABAS
1. User should be able to cancel operation
2. Five different measures
3. Multi-threaded solution
4. How to reason about each measure
