Computer @ Carnegie Mellon (99-101)

All Computer Science majors, are required to complete Computing@Carnegie Mellon (C@CM) during the first-half of your first semester.

C@CM is a 3-unit, pass/fail course that will teach you foundational skills on safe, responsible and effective computing and information literacy, focusing on the resources, tools and technologies that are specific to Carnegie Mellon. This is not a programming course and does not require any coding at all!

You can complete this course over the summer if you like, starting on July 10. To finish the course over the summer, you must complete it by August 13. You will take the final exam during Orientation Week (provided that you have fulfilled the eligibility guidelines).

To complete the course over the summer, you will find a link to C@CM in Canvas: http://www.cmu.edu/canvas/

You are registered automatically in 99-101 C@CM Section X1. There is nothing you need to do. You are good to go as soon as you can see the corresponding link in Canvas.

If you do not want to do this course over the summer, you must take it during the first-half of the fall semester. But, I very strongly suggest that you complete this course over the summer. By doing so, you will have extra time to dedicate to the other courses you will be taking this fall. And believe me, you will need the extra time! But, if you decide that you do not want to complete C@CM over the summer then you need to let me know.

You can find more information about C@CM and frequently asked questions at: https://cmu.instructure.com/courses/1084/pages/faqs
