

Linux Boot Camp

Jack Biggs Sol Boucher 17 Jan 2016

Connecting

<u>SSH</u>

Windows users: PuTTY (or SSH Tectia)

Mac & Linux users: Terminal (Just type ssh!)

andrewid@shark.ics.cs.cmu.edu

<u>Files</u>

Windows, Mac, Linux users: Filezilla

andrewid@unix.andrew.cmu.edu

Discouraged for use with text editing - more on that later

Welcome!

```
$ ls
$ cd private
$ mkdir 15-213
$ cd 15-213
$ mv ~/Downloads/datalab-handout.tar .
$ tar xvf datalab-handout.tar
$ cd datalab
```

Terminal Shortcuts

- ~ is an alias to your home directory.
 - Ex: cp foo.txt ~
- . is an alias to your present directory.
 - Ex: cp ~/foo.txt .
- .. is an alias to the parent directory.
 - **Ex**: cp \sim /foo.txt ..
- * will match as many characters as it can.
 - <u>Ex</u>: cp ~/*.txt .
 - <u>Ex</u>: objdump -d *
 - **Ex**: rm *.c (be very very very careful!!)
 - There is no trash with rm. It is gone.

More Terminal Shortcuts

- Pressing tab will autocomplete filenames.
- Use the up+down arrow keys to scroll through your previous commands.
- Control+R lets you search your command history.
- Control+A jumps to the beginning of the line.
- Control+E jumps to the end of the line.
- Control+U clears everything to the left of the cursor.
- Control+C kills your current program.
- Control+D (on a blank line) exits the terminal.
- Control+L clears your screen.

Fancy Terminal Shortcuts

- Bash automatically splits things up in brackets!
 - **EX**: cp foo $\{1,2\}$.txt = cp foo1.txt foo2.txt
 - **EX**: cp foo.txt $\{,.bak\}$ = cp foo.txt foo.txt.bak
 - For when typing the same filename gets annoying
- Bash has for loops!
 - Ex: Append "15-213" to every file ending in .c for file in *.c; do echo "15-213" >> \$file; done
- Have fun, but don't break things or lose track of time

ls <dir>

- Lists the files in the present working directory, or, if specified, dir.
 - -I lists ownership and permissions.
 - -a shows hidden files ("dotfiles").
- pwd tells you your present working directory.

```
jbiggs@blueshark ~ $ ls
cover_letter.pdf factorial.py
                            Movies
                                     resume.pdf
                                                 test.wav
demo.py
          foo2.py
                            Music
                                     school
                                                 timer.py
Desktop
       foo.txt
                       Pictures
                                     solutions.py
display.py Fravic.pdf private
                                     src
Documents
              Library
                       public
                                     Templates
Downloads
               Minecraft.jar
                            Public
                                     test.py
jbiggs@blueshark ~ $ pwd
/afs/andrew.cmu.edu/usr10/jbiggs
jbiggs@blueshark ~ $
```

cd <directory>

- Try running cd to return to the previous directory.
- Try running cd .. to return to the parent directory.
- Changes your present working directory.

```
jbiggs@blueshark ~ $ ls
cover_letter.pdf
               factorial.py
                            Movies
                                    resume.pdf
                                                 test.wav
                            Music

display.py Fravic.pdf private
                                     src
Documents
            Library public
                                     Templates
Downloads Minecraft.jar Public
                                     test.py
jbiggs@blueshark ~ $ cd private/
jbiggs@blueshark ~/private $ mkdir 15-213
jbiggs@blueshark ~/private $ cd 15-213
jbiggs@blueshark ~/private/15-213 $
```

```
mv <src> <dest>
```

- cp works in exactly the same way, but copies instead
 - for copying folders, use cp -r
- dest can be into an existing folder (preserves name), or a file/folder of a different name
- src can be either a file or a folder

```
jbiggs@blueshark ~ $ cd private/
jbiggs@blueshark ~/private $ mkdir 15-213
jbiggs@blueshark ~/private $ cd 15-213
jbiggs@blueshark ~/private/15-213 $ mv ~/Downloads/datalab-handout.
tar .
```

tar <options> <filename>

- For full list of options, see man tar
- tar stands for tape archive. Was used on tapes!
- x extract, v verbose, f file input
- All of our handouts will be in tar format.

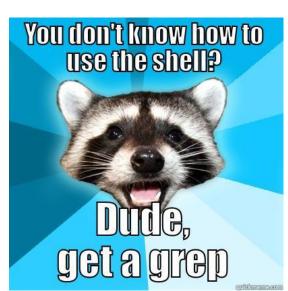

```
jbiggs@blueshark ~/private/15-213 $ tar xvf datalab-handout.tar
datalab-handout/
datalab-handout/bits.c
datalab-handout/Makefile
datalab-handout/README
datalab-handout/btest.h
datalab-handout/btest.c
datalab-handout/bits.h
datalab-handout/decl.c
datalab-handout/tests.c
datalab-handout/tests.c
```

Also, rm <file1> <file2> ... <filen>

- To remove an (empty) directory, use rmdir
 - To remove a folder and its contents, use rm -rf
 - Please be careful, don't delete your project.
 - There is no "Trash" here. It's gone.
 - Contact <u>ugradlabs@cs.cmu.edu</u> to restore.
 - Latest restore is up to a <u>day</u> old!

What's in a file? (using grep)

- grep <pattern> <file> will output any lines of
 file that have pattern as a substring
 - grep -v will output lines without pattern as substring
 - grep -n prints line numbers
 - grep -R will search recursively
- Try it: grep 'phase' bomb.c
 - grep -v -n 'printf' src.c
 - grep -R 'unsigned' .

pipes and redirects

- A pipe redirects output from one program as input to another program.
 - Ex: objdump -d bomb | grep "mov"
 - **Ex**: ls *.c | grep malloc
 - Ex: ls -l | grep jbiggs | wc -l
- Can redirect output to a file.
 - <u>Ex</u>: cmd arg1 ... argn > file.txt will write the output of cmd over file.txt.
 - Ex: cmd arg1 ... argn >> file.txt will
 append the output of cmd to file.txt.

Looking for something? grep -A -B

- grep -B <x>: include x lines Before match.
- grep -A <y>: include y lines After match.
- **Ex**: objdump -d | grep -A 25 explode bomb
- \blacksquare **Ex**: grep -B 20 return *.c

What's in a file? (using cat)

- cat <file1> <file2> ... <filen> lets you display the contents of a file in the terminal window.
 - Use cat -n to add line numbers!
- You can combine multiple files into one!
 - cat <file1> ... <filen> >> file.txt
- Good for seeing what's in small files.
- Try cat -n bomb.c. Too big, right?

What's in a file? (using less)

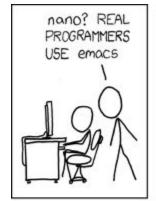

- less <file> will give you a scrollable interface for viewing large files without editing them.
 - To find something, use /
 - To view the next occurrence, press n
 - To view previous occurrence, press N
 - To quit, use q
- Try it: Type "/phase"

man <thing>

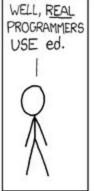

- What is that command? What is this C standard library function? What does this library do?
- Pages viewed with less
- Try it!
 - man grep
 - man tar
 - man strlen
 - man 3 printf
 - man stdio.h
 - man man

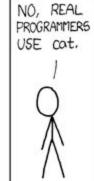

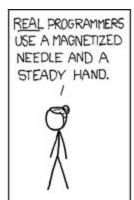

Editors (a touchy subject)

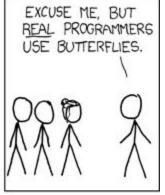

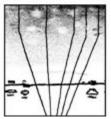

THE DISTURBANCE RIPPLES OUTWARD, CHANGING THE FLOW OF THE EDDY CURRENTS IN THE UPPER ATMOSPHERE.

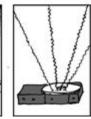

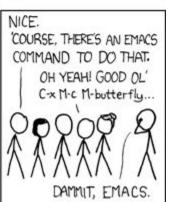

THESE CAUSE MOMENTARY POCKETS
OF HIGHER-PRESSURE AIR TO FORM,

WHICH ACT AS LENSES THAT DEFLECT INCOMING COSMIC RAYS, FOCUSING THEM TO STRIKE THE DRIVE PLATTER AND FLIP THE DEGIRED BIT.

Editors (a touchy subject)

- vim is nice, made for very powerful text editing
 - Try running vimtutor to get started learning
- emacs is nice, made to be more versatile
 - Definitely do the emacs tutorial in emacs, "ctrl-h t"
- gedit has a GUI, but requires X Forwarding setup.
 Too platform-dependent to show here, sadly.
- I strongly recommend editing on the terminal.
- **Gist**: Use an editor with auto-indent and line numbers

screen

- Run simultaneous programs in different "tabs"
- <Control-a>, then press c: create new tab
- <Control-a>, then press k: kill current tab
 - Consider exiting bash rather than killing window (bad)
- <Control-a>, then press n: go to next tab
- <Control-a>, then press p: go to previous tab
- <Control-a>, then press <number>: go to tab <number>
- <Control-a>, then press a: send "Control-a" to window
- <Control-a>, then press ?: help
- All other shortcuts stay, screen only binds to <Controla>

Editors (if you really really just want a GUI)

Simple answer: Go to a Linux cluster on-campus, open a terminal, and run:

```
ssh -Y andrewid@shark.ics.cs.cmu.edu
```

- Now you can run gedit <filename> &
- & forks your process into the background so you can use the prompt without waiting for gedit to finish

Editors (if you really, really just want a GUI)

- Not-so-simple answer: Google "How to install X Forwarding on <platform>"
 - Mac: You need XQuartz
 - Windows: You need XMing and PuTTY
- This allows you to execute GUI applications on the shark machines, but have the GUI appear on your computer.

A word about editing locally and using (S)FTP

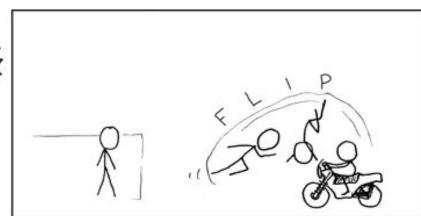

- We heavily discourage this.
- It is a pain.
- You will **waste time**.
 - Edit the file
 - Save the file
 - Upload the file
 - FTP: "Do you want to replace this file?"
 - Every single *time!* (['] ° □°) ['] ~ ' ')
- You will likely have to have a console on the shark machines open for gdb and compilation anyway.
 - Use screen!

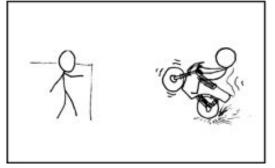

Commands related to 15-213

- gdb, the GNU Debugger, will be used for bomb lab.
- objdump displays the symbols in an executable.
- gcc is the GNU C Compiler.
- make is a configurable build system often used for compiling programs.
- We will provide other tools in the handouts as well

Vim Tutorial

- Basics (Quick vimtutor walkthrough)
- Splits & Tabs
 - Splitting the same file
- Specific, useful shortcuts (gd, %, null register, indent)
- Visual mode
- Find
 - Basic Regular Expressions
- Find-and-Replace
- Macros (super awesome!)
- Materials: http://cs.cmu.edu/~213/recitations/bootcamp.zip

Git Tutorial

- GitLab hosting: https://git.ece.cmu.edu/
- git clone git@git.ece.cmu.edu:<andrewid>/<repo>
- git status
- git add
- git commit -a
- git push
- git log
- git rm
- git diff
- git pull
- Visit a TA if you need help or want to do something advanced.
