

Carnegie Mellon

Do you love solving hard analytical problems? APT just might be the right place for you. We're looking for software engineers and quality assurance engineers with strong problem solving skills to transform huge data sets (millions of customers, billions of transactions) into valuable insights.

What's awesome about APT?

1. We develop a web app used to analyze and make complex million-dollar business decisions – our clients include Starbucks, Subway, and Walmart
2. We tackle complex problems involving high-performance statistical analysis of huge, noisy datasets, pattern-recognition, simulation, and more
3. We work in small teams (3 – 7 engineers) where you can have a real impact
4. We enjoy a fun work atmosphere with a casual dress code and an extremely tight company culture

We aren't just all work and no play - come hear what it's like to work at APT from some of our employees.
