

DELPHI

Innovation for the Real World

When: Wednesday, March 22, 5-6pm

Where: Gates 4405

Who: Zachary Batts (Robotics Institute Alumni)

What: A discussion on autonomous driving research at Delphi.

Abstract:

Autonomous driving is *the* technological challenge of the next decade. Delphi, an automotive parts company who recently acquired CMU startup Ottomatika, is now one of the leaders in this competitive industry. In this talk, we will discuss current challenges we face in automating driving in various environments and conditions. We will overview the active areas of development for this complex, full-stack robotics problem, including Perception, Localization, Planning, and Controls. Delphi is aggressively expanding its Pittsburgh office, and looking for candidates for over 25 engineering positions. Come to find out more!
