MongoDB TechTalk

10/9 4:30 PM Reddy Conference Room Gates&Hillman 4405
(FOOD & SWAG!)

MongoDB is the next-generation database that helps businesses transform their industries by harnessing the power of big data. The worlds most sophisticated organizations use MongoDB to create applications never before possible.

{ MongoDB is the fastest-growing database ecosystem with over 8 Million downloads and thousands of customers.

This tech talk will cover some of the problems MongoDB was created to solve, and then move on to MongoDB's features and architecture. We'll also take a look at how MongoDB is used by some real-world applications .

Presenter: Andrew Morrow - Sr. Software Engineer on MongoDB's Core Server Team. Previous to that Andrew was at Google and co-founded a start-up.
