Appendix B: PathLib Routines

This appendix contains copies of the manual pages describing the PathLib communication routines. The manual pages include the following:

- connections
- express
- marks
- messages
- plerror
- plinit
- spool
- streamgates

INDEX

A

Apply programming language, 1-7

Architecture overview, 1-1

Archiver, 2-11
  keys, 2-11
  options, 2-12

Assembler, 2-5
  options, 2-6

C

C, 2-2
  compiler, 2-2
  compiler options, 2-2
  extensions, 2-2
  language, 2-2

Cell, 1-1

Cell id, 5-4

COFF, 2-10

Commands
  diwas, 2-8
  iwar, 2-11
  iwas, 2-6
  iwcc, 2-2
  iwdump, 2-14
  iwld, 2-7
  iwmon, 3-4, 3-6
  iwnm, 2-13
  iwprof, 2-9
  iwsize, 2-15
  lgo, 3-2
  load, 3-6
  quit, 3-6
  rtslink, 3-2
  run, 3-6
  siblock, 3-6, 5-3
  sibunlock, 3-6

Common Object File Format, 2-10

Communication, 1-4
  fine-grained, 1-4
  memory-based, 1-4
  message-based, 1-4
  overhead, 1-4
  program access to, 1-5
  program-based, 1-4
  systolic, 1-4

Communication agent, 1-2, 4-1

Component, 1-1

Component architecture, 1-1, 1-3

Computation agent, 1-2

Configuration file, 5-2

Connections, 4-2
  accepting, 4-2
  concluding, 4-2
  creating, 4-2
  destroying, 4-2
  PathLib functions, 4-2
  using, 4-7

Connectivity, 1-5

D

Data forwarding, 4-5

Data movement, 4-3
  sentinel, 4-5

Data routing, program access to, 1-5

Deadlock, 4-7

Debugging a program, 3-4

Developing a program, 5-1

Disassembler, 2-8
  options, 2-8

diwas command, 2-8

Dumper, 2-14
  options, 2-14

E

Example programs
  four-cell “Hello World”, 5-4
  matrix multiply, 5-9
  single-cell, 5-1
  single-cell using PathLib, 5-5

Executing a program, 3-2, 3-4

Express, using, 4-9

Express operations, 4-5

F

File manipulation
  archiver, 2-11
  dumper, 2-14
  sizer, 2-15
  symbol table lister, 2-12
File manipulation tools, 2-1, 2-10

H

Host-resident software
  file manipulation tools, 2-10

I

iwar command, 2-11
iWarp cell, 1-1
iWarp component, 1-1
iwas command, 2-6
iwcc command, 2-2
iwdump command, 2-14
iwld command, 2-7
iwmon, 3-1, 3-4
  command options, 3-4
  command syntax, 3-4
iwmon command, 3-4, 3-6
iwnm command, 2-13
iwprof command, 2-9
iwsize command, 2-15

L

lgo, 3-1, 3-2, 5-3
  command options, 3-3
  command script, 3-3
  command syntax, 3-3
Linker, 2-7
  options, 2-7
Linking to RTS, 3-2
Lister, 2-12
  options, 2-13
load command, 3-6
Loading a program, 3-2, 3-4, 3-6
Loading and executing, lgo, 3-2
Local memory, 1-2
Locking the SIB, 5-3
Logical cell id, 5-4
Logical channel, 4-1
  aggregate, 4-5
Logical channels, 1-5
  express, 4-5

M

Memory allocation, 3-1
  heap, 3-2
  stack, 3-2
Message, 1-4
  header, 4-2
  trailer, 4-2
Message queue, 1-5
Message-based communication, 1-4
Messages, 4-2
  ending, 4-3
  receiving, 4-3
  starting, 4-3
  using, 4-8
Monitor, 3-4
  commands, 3-4
  example, 3-6
  exiting, 3-6
  input conventions, 3-5
  invoking, 3-6
  iwmon command, 3-4
  loading a program, 3-6
  running a program, 3-6

P

Parallel program generators, 1-6
  Apply, 1-6
PathLib, 4-1, 5-5
  connection functions, 4-2
  example, 4-11
  express functions, 4-5
  guidelines for using, 4-6
  initialization functions, 4-6
  marks functions, 4-6
  message functions, 4-3
  spooling functions, 4-5

streaming functions, 4-4
terminology, 4-9

Pathway control table (PCT), 4-1

PCO, 2-3, 2-5

PCT, 4-1
entries, 4-1

Physical connection, 1-5

Portable code optimizer, 2-3, 2-5

Profiler, 2-9
options, 2-9

Program communication, 1-4, 4-1
PathLib, 4-1

Program development, 5-1

Program development tools, 1-6, 2-1
assembler, 2-6
C, 2-2
C compiler, 2-2
disassembler, 2-8
linker, 2-7
profiler, 2-9

Program-based communication, 1-4

Programming model, 1-6

Programs
debugging, 3-4
loading, 3-2, 3-4
running, 3-2, 3-4

Q

quit command, 3-6

R

Receiving data, 4-3

Reserving the SIB, 3-6

RTS, 1-6, 3-1

rtslink, 3-1, 3-2, 5-1
command options, 3-2
command syntax, 3-2

run command, 3-6

Running a program, 3-2, 3-4, 3-6

Runtime system, 1-6, 3-1

S

Sending data, 4-3

Sentinel, 4-5

SIB, 3-4
number, 3-4
reserving for execution, 3-6

siblock command, 3-6, 5-3

sibunlock command, 3-6

Sizer, 2-15
options, 2-15

Software, file manipulation, 2-10

Software marks, 4-5
receiving, 4-6
sampling, 4-6
sending, 4-6

SPLO, 3-2

Spooling, 4-4

Stack pointer low limit, 3-2

Streamgate, 4-3, 4-4
binding to a connection, 4-4

Streamgate binding, 4-3

Streaming, 4-3, 4-4

Sun Interface Board, 3-4

Symbol table lister, 2-12
options, 2-13

System architecture, 1-1

T

terminology, 4-9

Tools
file manipulation, 2-1
program development, 2-1
