

VA: Name _____

Andrew ID _____

Quizlet 4

Given the variable:

```
lst = [ "a", "b", "c", "d" ]
```

What will the following expressions evaluate to?

<code>lst[1]</code>	<code>"b"</code>
<code>lst[:len(lst)-1]</code>	<code>["a", "b", "c"]</code>

What will be printed if we run the code:

```
for i in range(len(lst)):
    print(i, lst[i])
```

```
0 a
1 b
2 c
3 d
```

Write a line of code that calls the **method** `index` on `lst` to get the position of value `"c"`.

```
lst.index("c")
```

VB: Name _____

Andrew ID _____

Quizlet 4

Given the variable:

```
lst = [ "w", "x", "y", "z" ]
```

What will the following expressions evaluate to?

<code>lst[1]</code>	<code>"x"</code>
<code>lst[:len(lst)-1]</code>	<code>["w", "x", "y"]</code>

What will be printed if we run the code:

```
for i in range(len(lst)):
    print(i, lst[i])
```

```
0 w
1 x
2 y
3 z
```

Write a line of code that calls the **method** `index` on `lst` to get the position of value `"y"`.

```
lst.index("y")
```
