

# 15-110 recitation 09

## Recap

- graphs, representation, searching, BFS/DFS
- Tractability, TSP,
- P v. NP

## Reminders!

- HW 4 due Monday!
- **Exam 2** next Friday!

# Problems

## Graphs + DFS practice

Draw the graph represented by this dictionary. Then trace a depth first search on the graph starting at A.

```
Graph_dict =  
{  
    A: [B, C, E]  
    B: [A, D, E]  
    C: [A]  
    D: [B]  
    E: [B, A]  
}
```

## Tractable v. Intractable

<b>Problem</b>	Sudoku solving Finding a way to visit every node in a graph exactly once Search an unsorted list
----------------	--------------------------------------------------------------------------------------------------------

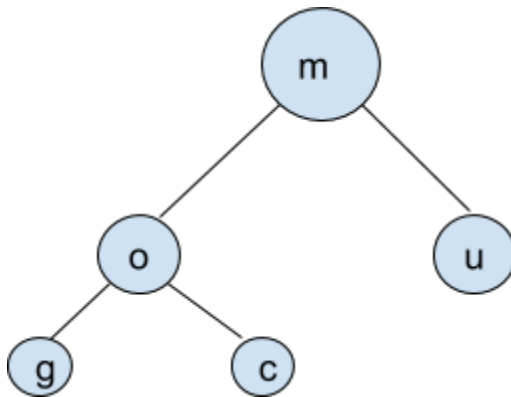

Figure out the minimum number of bins to store items with a certain size into bins which can only take a fixed size.

Sum all the values in a dictionary.

### more trees & graph practice!

#### Learning Objectives

Given this tree, write a function that will visit the nodes such that each time the value at the node is printed, it prints "gocmu"

```
def inorder (tree)
```
