VA: Name _____ andrewID _____

Quizlet 5

Consider the given code below:

```
shop = { "apples": 12, "bananas": 7, "cherries": 30 }

shop["bananas"] = 20
shop["dates"] = 15
shop["apples"] = shop["apples"] + 5

for key in shop:
    shop[key] = shop[key] - 2
```

What value will the variable **shop** hold at the end of the code execution?

VB: Name _____ andrewID _____

Quizlet 5

Consider the given code below:

```
shop = { "apples": 13, "bananas": 6, "cherries": 10 }

shop["bananas"] = 20
shop["dates"] = 15
shop["apples"] = shop["apples"] + 5

for key in shop:
    shop[key] = shop[key] - 3
```

What value will the variable **shop** hold at the end of the code execution?
