

An abstract graphic on the left side of the slide, featuring a sphere-like shape composed of a dense grid of intersecting red, green, and blue lines. The lines are curved and follow the contour of the sphere, creating a complex, woven pattern. The sphere is set against a dark gray background.

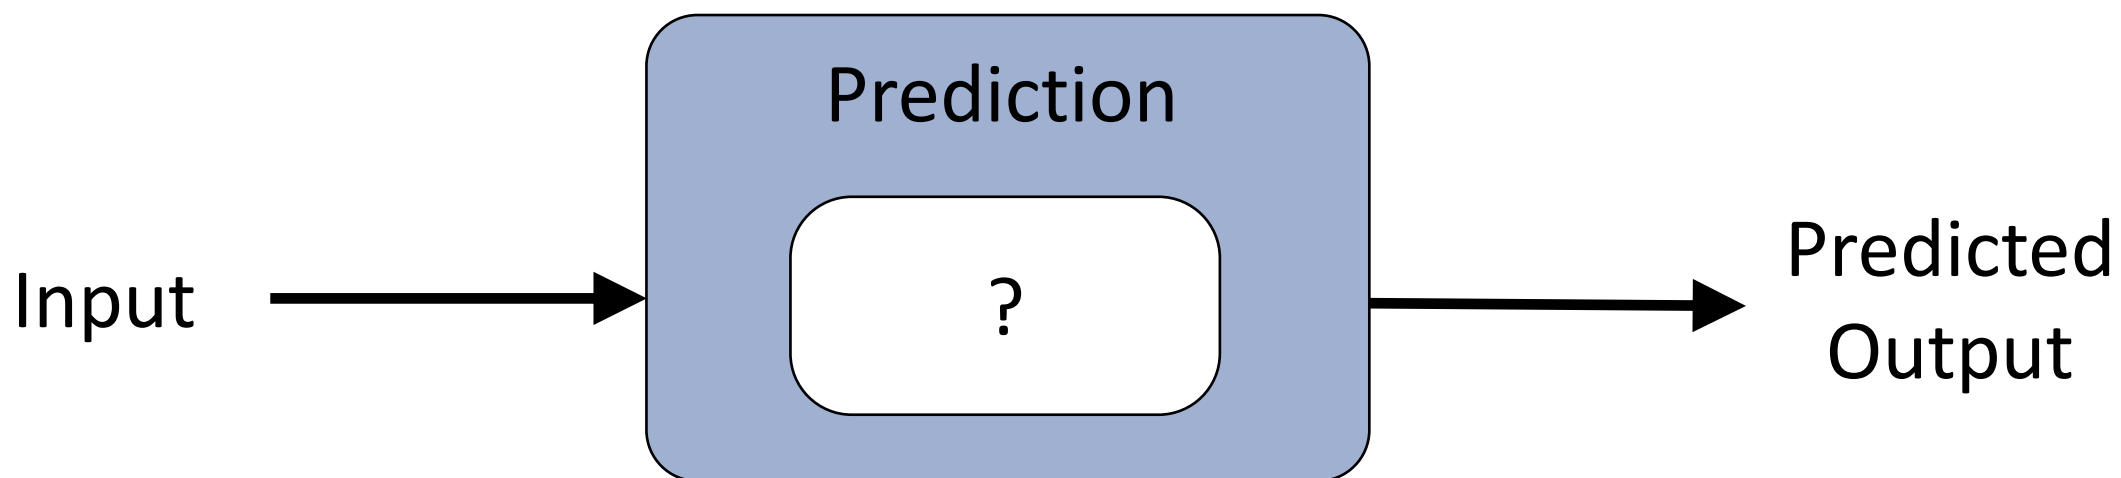

Demystifying AI Image Classification

Instructor: Pat Virtue

Image Classification

Input: Image

Output: Category that object in image belongs to (label)

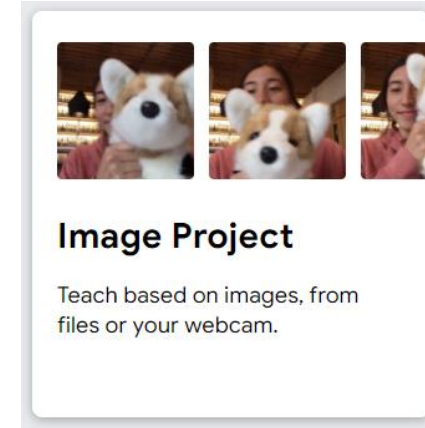

Teachable Machine

1. <https://teachablemachine.withgoogle.com/>

2. Click Get Started

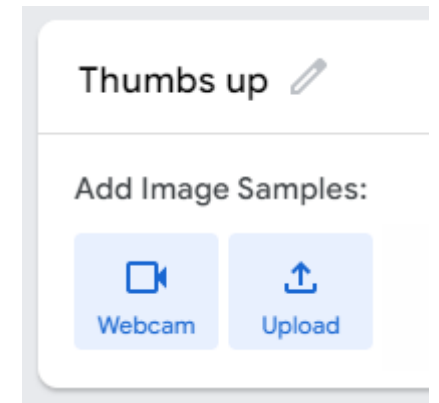

3. Select Image Project

4. Select Standard Image Model

5. Rename Class 1 and 2: Thumbs up and thumbs down

6. Use webcam to collect images

7. Train your model

Reminder: Machine Learning

Using (training) data to learn a model that we'll later use for prediction

ML Image Classification Training

Training Data:

Images and corresponding labels

Model:

Neural network

- Humans design the neural network *structure*
- Network *parameters* (think slope and intercept, but a whole lot of them) are determined during training to minimize training error

Very Loose Inspiration: Human Neurons

Neural Networks

Inspired by actual human brain

Teachable Machine

<https://teachablemachine.withgoogle.com/>

1. Task 1: Create a new image classification project with at least three classes
2. Task 2: Try training a project with very few images (one image per class maybe). Is this enough? Why or why not?
3. Task 3: Try training a project with training data that looks decent but is actually really biased.

Reminder: Machine Learning

Using (training) data to learn a model that we'll later use for prediction

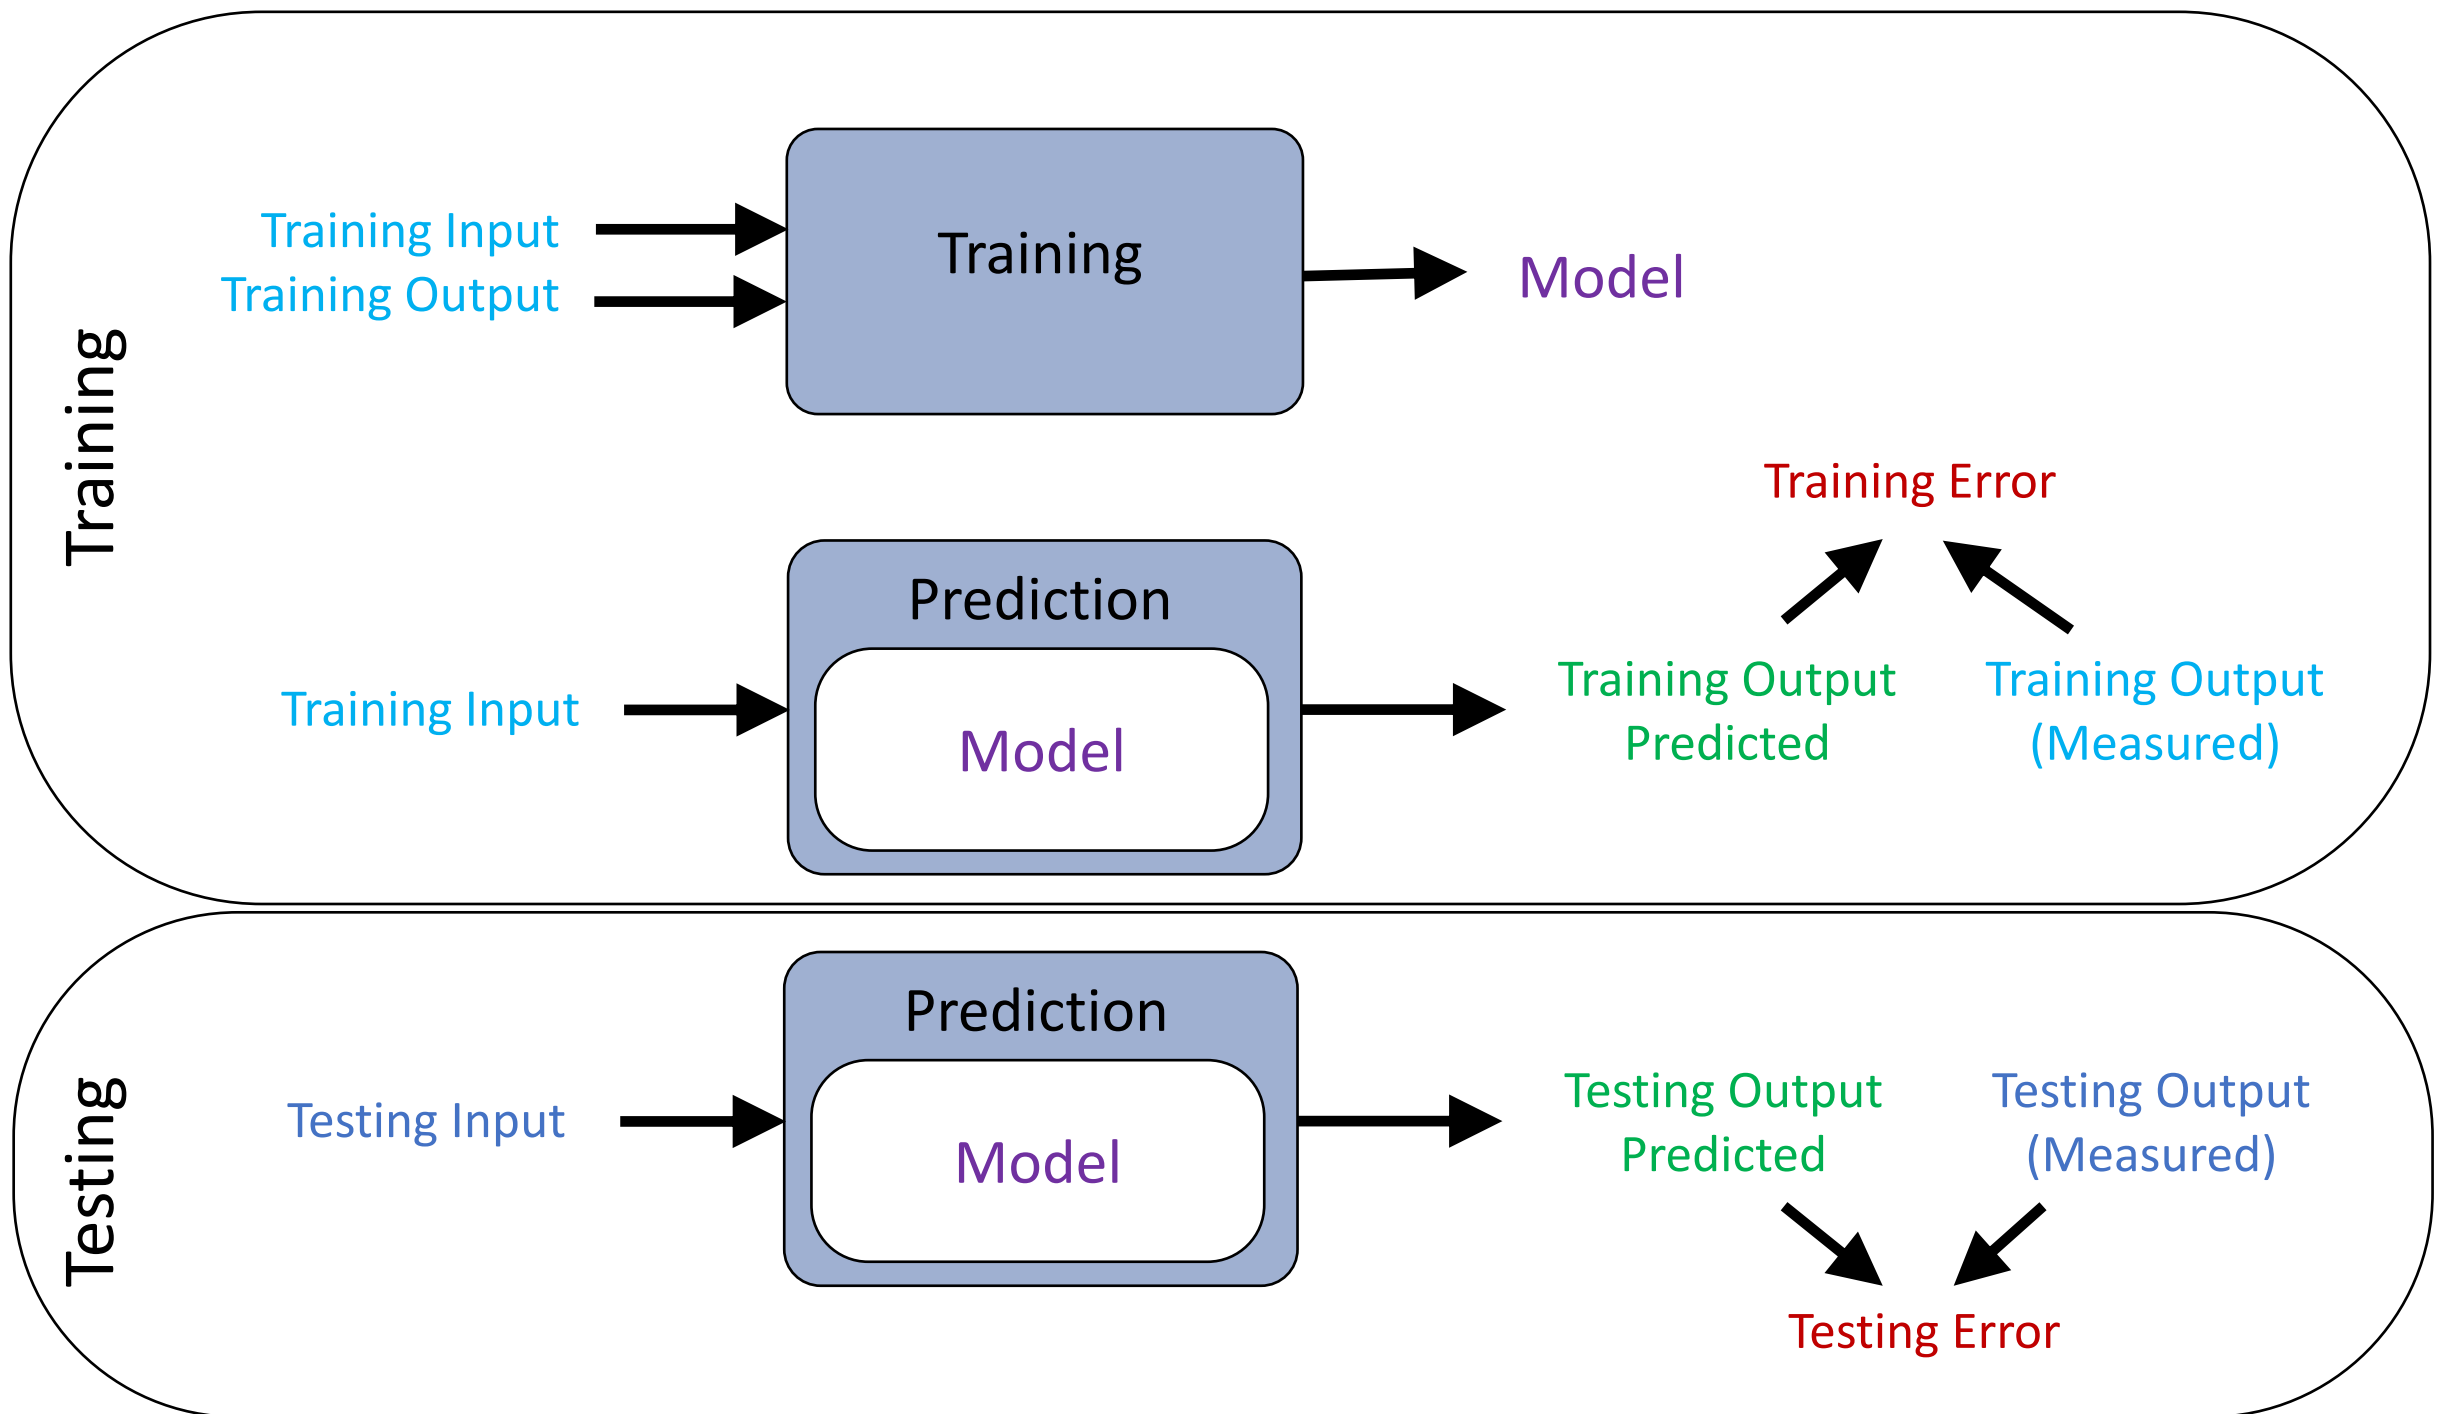

Image Classification Data

Where is the data on the JetBot?
