## Warm-up:

What is the relationship between number of constraints and number of possible solutions?

In other words, as the number of the constraints increases, does the number of possible solutions:
A) Increase
B) Decrease
C) Stay the same

## Announcements

Assignments:

- P2: Optimization
- Due Thu 2/21, 10 pm

Midterm 1 Exam

- Mon 2/18, in class
- Recitation Fri is a review session
- See Piazza post for details

Alita Class Field Trip!

- Moved to Saturday, 2/23, afternoon

## Warm-up:

What is the relationship between number of constraints and number of possible solutions?

In other words, as the number of the constraints increases, does the number of possible solutions:
A) Increase
B) Decrease
C) Stay the same

Where is the knowledge in our CSPs?

## AI: Representation and Problem Solving

## Propositional Logic

Instructors: Pat Virtue \& Stephanie Rosenthal

## Logic Representation and Problem Solving

To honk or not to honk

## Logical Agents

Logical agents and environments

## Wumpus World

Logical Reasoning as a CSP

- $\mathrm{B}_{\mathrm{ij}}=$ breeze felt
- $\mathrm{S}_{\mathrm{ij}}=$ stench smelt
- $\mathrm{P}_{\mathrm{ij}}=$ pit here
- $\mathrm{W}_{\mathrm{ij}}=$ wumpus here
- $\underline{G}=$ gold

http://thiagodnf.github.io/wumpus-world-simulator/

A Knowledge-based Agent
function KB-AGENT(percept) returns an action persistent: KB, a knowledge base $t$, an integer, initially 0

TELL(KB, PROCESS-PERCEPT(percept, t )) action $\leftarrow \operatorname{ASK}(K B$, PROCESS-QUERY(t))

TELL(KB, PROCESS-RESUIT(action, t))
$\mathrm{t} \leqslant \mathrm{t}+1$
return action

## Logical Agents

So what do we TELL our knowledge base (KB)?

- Facts (sentences)
- The grass is green
- The sky is blue
- Rules (sentences)
- Eating too much candy makes you sick
- When you're sick you don't go to school
- Percepts and Actions (sentences)
- Pat ate too much candy today

What happens when we ASK the agent?

- Inference - new sentences created from old
- Pat is not going to school today

## Logical Agents

## Sherlock Agent

- Really good knowledge base
- Evidence
- Understanding of how the world works (physics, chemistry, sociology)
- Really good inference
- Skills of deduction
- "It's elementary my dear Watson"

Dr. Strange?
Alan Turing?
Kahn?

## Worlds

What are we trying to figure out?

- Who, what, when, where, why
- Time: past, present, future

- Actions, strategy
- Partially observable? Ghosts, Walls

## Models

How do we represent possible worlds with models and knowledge bases?
How do we then do inference with these representations?

## Wumpus World

Possible Models

- $\mathrm{P}_{1,2} \mathrm{P}_{2,2} \mathrm{P}_{3,1}$

## Wumpus World

Possible Models

- $P_{1,2} P_{2,2} P_{3,1}$
- Knowledge base
- Nothing in $[1,1]$
- Breeze in $[2,1]$

## Wumpus World

Possible Models

- $P_{1,2} P_{2,2} P_{3,1}$
- Knowledge base
- Nothing in [1,1]
- Breeze in [2,1]
- Query $\alpha_{1}$ :

- No pit in [1,2]

## Wumpus World

Possible Models

- $P_{1,2} P_{2,2} P_{3,1}$
- Knowledge base
- Nothing in [1,1]
- Breeze in [2,1]
- Query $\alpha_{2}$ :

- No pit in [2,2]

## Logic Language

## Natural language?

## Propositional logic

- Syntax: $P \vee(\neg Q \wedge R) ; \quad X_{1} \Leftrightarrow$ (Raining $\Rightarrow$ Sunny $)$
- Possible world: $\{P=$ true, $\mathrm{Q}=$ true, $\mathrm{R}=$ false, $\mathrm{S}=$ true $\}$ or 1101
- Semantics: $\alpha \wedge \beta$ is true in a world iff is $\alpha$ true and $\beta$ is true (etc.)

First-order logic

- Syntax: $\forall \mathrm{x} \exists \mathrm{y} \mathrm{P}(\mathrm{x}, \mathrm{y}) \wedge \neg \mathrm{Q}(\mathrm{Joe}, \mathrm{f}(\mathrm{x})) \Rightarrow \mathrm{f}(\mathrm{x})=\mathrm{f}(\mathrm{y})$
- Possible world: Objects $\mathrm{o}_{1}, \mathrm{o}_{2}, \mathrm{o}_{3}$; Pholds for $\left\langle\mathrm{o}_{1}, \mathrm{O}_{2}\right\rangle$; Q holds for $\left.\left\langle\mathrm{o}_{3}\right\rangle ; \mathrm{f}_{\mathrm{o}}\right)=\mathrm{o}_{1}$; $J o e=O_{3}$; etc.
- Semantics: $\phi(\sigma)$ is true in a world if $\sigma=o_{j}$ and $\phi$ holds for $\mathrm{o}_{\mathrm{j}}$; etc.

## Propositional Logic

## Propositional Logic

## Symbol:

- Variable that can be true or false
- We'll try to use capital letters, e.g. A, B, $P_{1,2}$
- Often include True and False

Operators:

- $\neg$ A: not A
- $A \wedge B: A$ and $B$ (conjunction)
- $\mathrm{A} \vee \mathrm{B}: \mathrm{A}$ or B (disjunction) Note: this is not an "exclusive or"
- $A \Rightarrow B$ : $A$ implies $B$ (implication). If $A$ then $B$
- $A \Leftrightarrow B$ : $A$ if and only if $B$ (biconditional)

Sentences

## Propositional Logic Syntax

Given: a set of proposition symbols $\left\{\mathrm{X}_{1}, \mathrm{X}_{2}, \ldots, \mathrm{X}_{\mathrm{n}}\right\}$

- (we often add True and False for convenience) $X_{i}$ is a sentence
If $\alpha$ is a sentence then $\neg \alpha$ is a sentence
If $\alpha$ and $\beta$ are sentences then $\alpha \wedge \beta$ is a sentence
If $\alpha$ and $\beta$ are sentences then $\alpha \vee \beta$ is a sentence
If $\alpha$ and $\beta$ are sentences then $\alpha \Rightarrow \beta$ is a sentence
If $\alpha$ and $\beta$ are sentences then $\alpha \Leftrightarrow \beta$ is a sentence
And p.s. there are no other sentences!

Notes on Operators
$\boldsymbol{\alpha} \vee \boldsymbol{\beta}$ is inclusive or, not exclusive

## Truth Tables

$\boldsymbol{\alpha} \vee \boldsymbol{\beta}$ is inclusive or, not exclusive

| $\boldsymbol{\alpha}$ | $\boldsymbol{\beta}$ | $\boldsymbol{\alpha} \wedge \boldsymbol{\beta}$ |
| :---: | :---: | :---: |
| F | F | F |
| F | T | F |
| T | F | F |
| T | T | T |

| $\boldsymbol{\alpha}$ | $\boldsymbol{\beta}$ | $\boldsymbol{\alpha} \vee \boldsymbol{\beta}$ |
| :---: | :---: | :---: |
| F | F | F |
| F | T | T |
| T | F | T |
| T | T | T |

Notes on Operators
$\boldsymbol{\alpha} \vee \boldsymbol{\beta}$ is inclusive or, not exclusive
$\alpha \Rightarrow \boldsymbol{\beta}$ is equivalent to $\neg \boldsymbol{\alpha} \vee \boldsymbol{\beta}$

- Says who?

## Truth Tables

$\alpha \Rightarrow \boldsymbol{\beta}$ is equivalent to $\neg \boldsymbol{\alpha} \vee \boldsymbol{\beta}$

| $\boldsymbol{\alpha}$ | $\boldsymbol{\beta}$ | $\boldsymbol{\alpha} \Rightarrow \boldsymbol{\beta}$ | $\neg \boldsymbol{\alpha}$ | $\neg \boldsymbol{\alpha} \vee \boldsymbol{\beta}$ |
| :---: | :---: | :---: | :---: | :---: |
| F | F | T | T | T |
| F | T | T | T | T |
| T | F | F | F | F |
| T | T | T | F | T |

Notes on Operators
$\boldsymbol{\alpha} \vee \boldsymbol{\beta}$ is inclusive or, not exclusive
$\alpha \Rightarrow \boldsymbol{\beta}$ is equivalent to $\neg \boldsymbol{\alpha} \vee \boldsymbol{\beta}$

- Says who?
$\alpha \Leftrightarrow \boldsymbol{\beta}$ is equivalent to $(\boldsymbol{\alpha} \Rightarrow \boldsymbol{\beta}) \wedge(\boldsymbol{\beta} \Rightarrow \boldsymbol{\alpha})$
- Prove it!

## Truth Tables

$\boldsymbol{\alpha} \Leftrightarrow \boldsymbol{\beta}$ is equivalent to $(\boldsymbol{\alpha} \Rightarrow \boldsymbol{\beta}) \wedge(\boldsymbol{\beta} \Rightarrow \boldsymbol{\alpha})$

| $\boldsymbol{\alpha}$ | $\boldsymbol{\beta}$ | $\boldsymbol{\alpha} \Leftrightarrow \boldsymbol{\beta}$ | $\boldsymbol{\alpha} \Rightarrow \boldsymbol{\beta}$ | $\boldsymbol{\beta} \Rightarrow \boldsymbol{\alpha}$ | $(\boldsymbol{\alpha} \Rightarrow \boldsymbol{\beta}) \wedge(\boldsymbol{\beta} \Rightarrow \boldsymbol{\alpha})$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| F | F | T | T | T | T |
| F | T | F | T | F | F |
| T | F | F | F | T | F |
| T | T | T | T | T | T |

Equivalence: it's true in all models. Expressed as a logical sentence:

$$
(\boldsymbol{\alpha} \Leftrightarrow \boldsymbol{\beta}) \Leftrightarrow[(\boldsymbol{\alpha} \Rightarrow \boldsymbol{\beta}) \wedge(\boldsymbol{\beta} \Rightarrow \boldsymbol{\alpha})]
$$

## Literals

A literal is an atomic sentence:

- True
- False
- Symbol
- $\neg$ Symbol

## Monty Python Inference

There are ways of telling whether she is a witch

## Sentences as Constraints

Adding a sentence to our knowledge base constrains the number of possible models:

| Possible Models | P | Q | R |
| :---: | :---: | :---: | :---: |
|  | false | false | false |
|  | false | false | true |
|  | false | true | false |
|  | false | true | true |
|  | true | false | false |
|  | true | false | true |
|  | true | true | false |
|  | true | true | true |

## Sentences as Constraints

Adding a sentence to our knowledge base constrains the number of possible models:

KB: Nothing
KB: $[(P \wedge \neg Q) \vee(Q \wedge \neg P)] \Rightarrow R$

| Possible | $\mathbf{P}$ | $\mathbf{Q}$ | $\mathbf{R}$ |
| :---: | :---: | :---: | :---: |
| Models | false | false | false |
|  | false | false | true |
|  | false | true | false |
| false | true | true |  |
| true | false | false |  |
| true | false | true |  |
| true | true | false |  |
| true | true | true |  |

## Sentences as Constraints

Adding a sentence to our knowledge base constrains the number of possible models:

KB: Nothing
KB: $[(P \wedge \neg Q) \vee(Q \wedge \neg P)] \Rightarrow R$
$K B: R,[(P \wedge \neg Q) \vee(Q \wedge \neg P)] \Rightarrow R$

| Possible <br> Models | $\mathbf{P}$ | $\mathbf{Q}$ | $\mathbf{R}$ |
| :---: | :---: | :---: | :---: |
|  | false | false | false |
|  | false | false | true |
|  | false | true | false |
| false | true | true |  |
| true | false | false |  |
| true | false | true |  |
| true | true | false |  |
| true | true | true |  |

## Sherlock Entailment

"When you have eliminated the impossible, whatever remains, however improbable, must be the truth" - Sherlock Holmes via Sir Arthur Conan Doyle

- Knowledge base and inference allow us to remove impossible models, helping us to see what is true in all of the remaining models

## Entailment

## Entailment: $\underline{\alpha} \mid=\beta$ (" $\alpha$ entails $\beta$ " or " $\beta$ follows from $\alpha$ ") iff in every world

 where $\alpha$ is true, $\beta$ is also true- I.e., the $\alpha$-worlds are a subset of the $\beta$-worlds $[\operatorname{models}(\alpha) \subseteq \operatorname{models}(\beta)]$

Usually we want to know if $K$. $\mid=$ query

- models(KB) $\subseteq$ models(query)
- In other words
- $K B$ removes all impossible models (any model where $K B$ is false)
- If $\beta$ is true in all of these remaining models, we conclude that $\beta$ must be true

## Entailment and implication are very much related

- However, entailment relates two sentences, while an implication is itself a sentence (usually derived via inference to show entailment)

## Wumpus World

Possible Models

- $P_{1,2} P_{2,2} P_{3,1}$
- Knowledge base
- Nothing in $[1,1]$
- Breeze in [2,1]

## Wumpus World

Possible Models

- $P_{1,2} P_{2,2} P_{3,1}$
- Knowledge base
- Nothing in [1,1]
- Breeze in [2,1]
- Query $\alpha_{1}$ :

- No pit in $[1,2]$

## Wumpus World

## Possible Models

- $\mathrm{P}_{1,2} \mathrm{P}_{2,2} \mathrm{P}_{3,1}$
- Knowledge base
- Nothing in [1,1]
- Breeze in [2,1]
- Query $\alpha_{2}$ :

- No pit in $[2,2]$

## Propositional Logic Models

| All Possible Models |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | A | 0 | 0 | 0 | 0 | 1 | 1 |
| 1 | 1 |  |  |  |  |  |  |  |  |
| Model Symbols | B | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 |
| C | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 |  |

## Piazza Poll 1

Does the KB entail query C ?

Entailment: $\alpha \mid=\beta$ " $\alpha$ entails $\beta$ " iff in every world where $\alpha$ is true, $\beta$ is also true

Piazza Poll 1
Does the KB entail query C ?

Entailment: $\alpha \mid=\beta$
" $\alpha$ entails $\beta$ " iff in every world where $\alpha$ is true, $\beta$ is also true

All Possible Models

| A | 0 | 0 | 0 | 0 | 1 | 1 | 1 | 1 |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| B | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 |
| C | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 |
| A | 0 | 0 | 0 | 0 | 1 | 1 | 1 | 1 |
| $\mathrm{~B} \Rightarrow \mathrm{C}$ | 1 | 1 | 0 | 1 | 1 | 1 | 0 | 1 |

Query

## Entailment

How do we implement a logical agent that proves entailment?

- Logic language
- Propositional logic
- First order logic
- Inference algorithms
- Theorem proving
- Model checking

## Propositional Logic

Check if sentence is true in given model
In other words, does the model satisfy the sentence?
function PL-TRUE?( $\alpha$, model) returns true or false
$\rightarrow$ if $\alpha$ is a symbol then return Lookup( $\alpha$, model)
if $\mathrm{Op}(\alpha)=\neg$ then return not(PL-TRUE?(Arg1( $\alpha$ ),model))
if $\underline{O p(\alpha)}=\widehat{\wedge}$ )then return and (PL-TRUE?(Arg1( $\alpha$ ), model)
PL-TRUE?(Arg2( $\alpha$ ),model))
etc.
(Sometimes called "recursion over syntax")

## Simple Model Checking

function TT-ENTAILS?(KB, $\alpha$ ) returns true or false return TT-CHECK-ALL(KB, $\alpha$, symbols( KB) U symbols $(\alpha),\{ \})$
function TT-CHECK-ALL(KB, $\alpha$, symbols, model) returns true or false if empty?(symbols) then
if PL-TRUE?(KB, model) then return PL-TRUE?( $\alpha$, model) else return true else
$P \leftarrow$ first(symbols)
rest $\leftarrow$ rest(symbols)
return and (TT-CHECK-ALL(KB, $\alpha$, rest, model $\cup\{P=$ true $\})$
TT-CHECK-ALL_(KB, $\alpha$, rest, model $\cup\{P=$ false $\}))$

## Simple Model Checking, contd.

Same recursion as backtracking
$\mathrm{O}\left(2^{\mathrm{n}}\right)$ time, linear space
We can do much better!
