THE HORSE IN MOTION.

Illustrated by
MUYBRIDGE.

"SALLIE GARDNER," owned by LELAND STANFORD; running at a 1.40 gait over the Palo Alto track, 19th June, 1878.

The negatives of these photographs were made at intervals of twenty-seven inches of distance, and about the twenty-fifth part of a second of time; they illustrate consecutive positions assumed in each twenty-seven inches of progress during a single stride of the mare. The vertical lines were twenty-seven inches apart; the horizontal lines represent elevations of four inches each. The exposure of each negative was less than the two-thousandth part of a second.

Computational Camera

Programmable Imaging

Programmable Flash

Goals

- Focus on understanding concepts in computational imaging
 - Thinking beyond pixels in ray-space
 - 4D Lightfield, Plenoptic Sampling
 - New ways of sampling the visual world
 - Multiplexing
 - Modifying the capture process to simplify the problem
 - Motion blur, Defocus blur
 - Using reconstruction algorithms and priors
 - Compressive Sensing
- What we will not cover
 - Traditional image processing, photo manipulations & editing

Schedule

Introduction	Narasimhan, 10 mins
Assorted Pixels	Narasimhan, 20 mins
Coding and Modulation in Cameras	Agrawal, 45 mins
Break	10 min
Light Fields and Applications	Mohan, 60 mins
Break	10 min
Computational Illumination	Narasimhan, 45 mins
Future Trends	Agrawal, 15 mins
Discussion
