15-859(B) Machine Learning Theory

Homework # 4.5 **Due: end of March, 2006**

Some time within the next 2 weeks, come talk with me (in person or by email) about your plans for your class project.

A typical project might be: reading one or two papers on some topic and explaining what they are about and how they relate to material from the course, posing and thinking about some theoretical machine learning problem, an experimental project related to algorithms or questions from the course, etc. You should plan on giving a short (10-min) presentation on your project in the last week of class, and handing in a short writeup (say, 4-5 pages) by May 3.
