

# 10-301/601: Introduction to Machine Learning

## Lecture 1 – Problem Formulation & Notation

Henry Chai

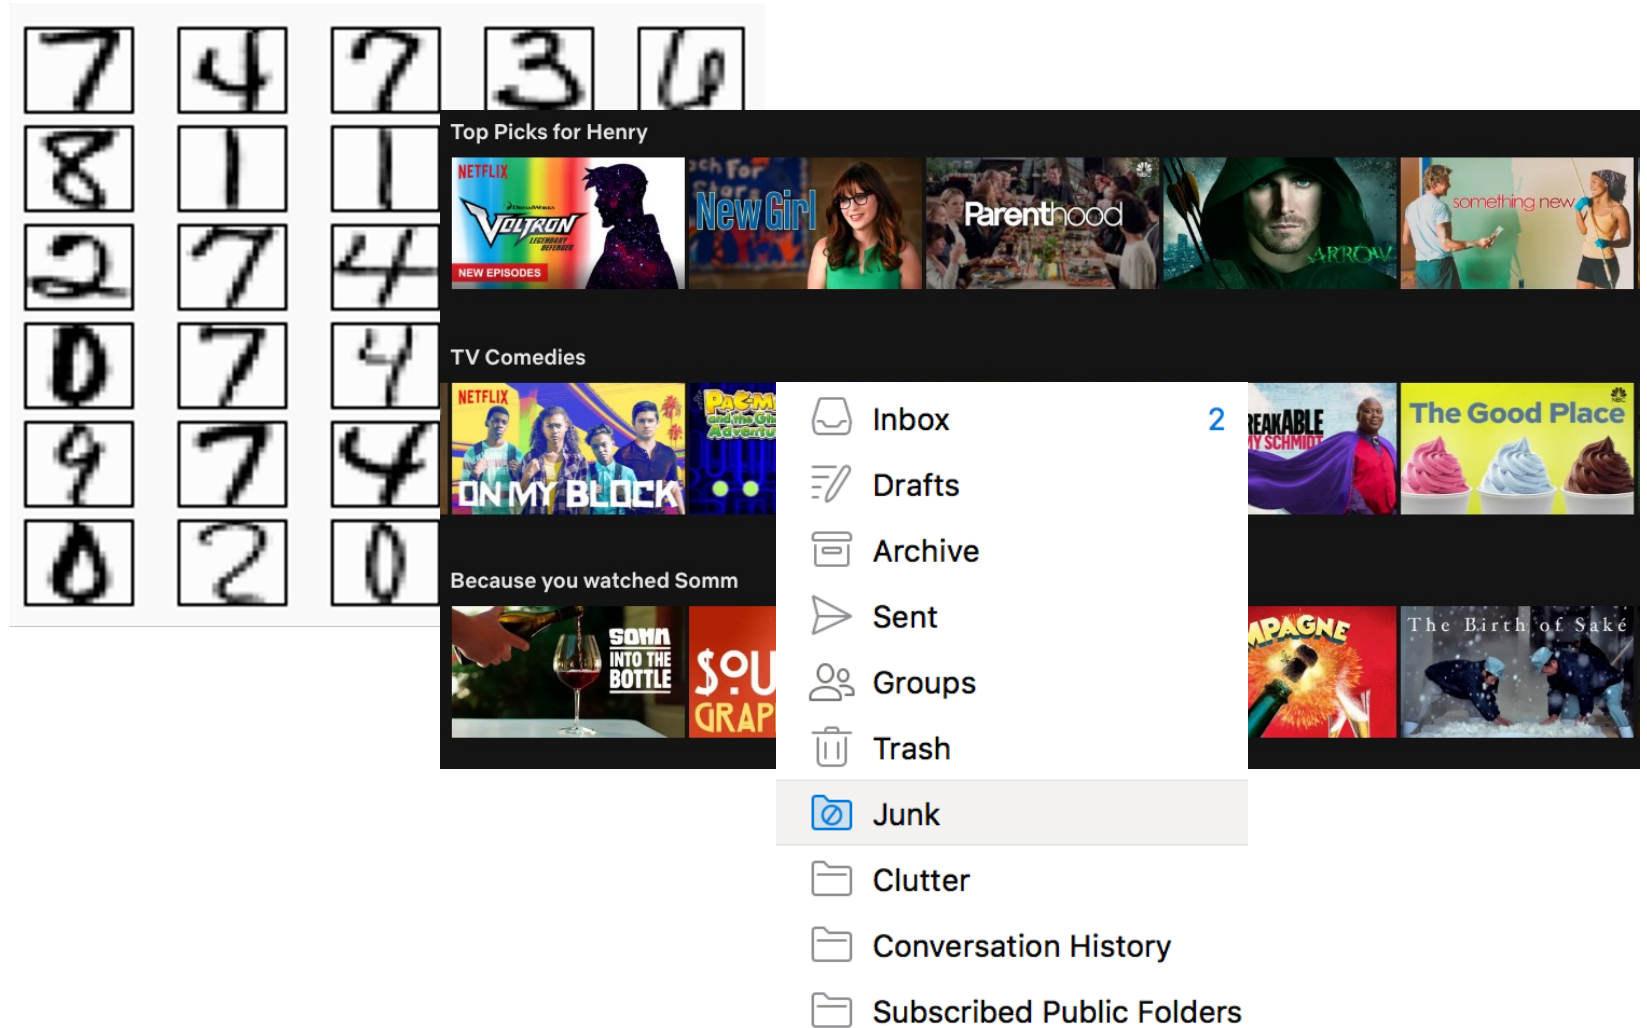

5/17/22

# Front Matter

- Announcements:
  - HW1 released 5/17 (today!), due 5/24 at 1 PM
  - Recitation 1 on 5/19: review of prerequisite material
  - General advice for the summer:
    - Start HWs early!
    - Go to office hours! Starting tomorrow, 5/18
- Recommended Readings:
  - None

# What is Machine Learning?

# Machine Learning (Then)

# Machine Learning (Now)

# Premise of Machine Learning

- There exists some pattern/behavior of interest
- The pattern/behavior is difficult to describe
- There is data
- Use data to “learn” the pattern

# What is Machine Learning?

# Things Machine Learning Isn't

- Artificial intelligence
- Data science

# Things Machine Learning Isn't

- Artificial intelligence: Creating machines that can mimic human behavior/cognition
- Data science

# Things Machine Learning Isn't

- Artificial intelligence: Creating machines that can mimic human behavior/cognition
- Data science: Extracting knowledge/insights from noisy, unstructured data

# What is Machine Learning 10-301/601?

## Learning Paradigms:

*What data is available and when?  
What form of prediction?*

- supervised learning
- unsupervised learning
- semi-supervised learning
- reinforcement learning
- active learning
- imitation learning
- domain adaptation
- online learning
- density estimation
- recommender systems
- feature learning
- manifold learning
- dimensionality reduction
- ensemble learning
- distant supervision
- hyperparameter optimization

## Theoretical Foundations:

*What principles guide learning?*

- ☐ probabilistic
- ☐ information theoretic
- ☐ evolutionary search
- ☐ ML as optimization

## Problem Formulation:

*What is the structure of our output prediction?*

boolean	Binary Classification
categorical	Multiclass Classification
ordinal	Ordinal Classification
real-valued	Regression
ordering	Ranking
sequence	Structured Prediction

## Facets of Building ML Systems:

*How to build systems that are robust, efficient, adaptive, effective?*

1. Data prep
2. Model selection
3. Training (optimization / search)
4. Hyperparameter tuning on validation data
5. (Blind) Assessment on test data

## Big Ideas in ML:

*Which are the ideas driving development of the field?*

- inductive bias
- generalization / overfitting
- bias-variance decomposition
- generative vs. discriminative
- deep nets, graphical models
- PAC learning
- distant rewards

## Application Areas

*Key challenges?*

NLP, Speech, Computer Vision, Robotics, Medicine, Search

# What is Machine Learning 10-301/601?

- Supervised Models
  - Decision Trees
  - KNN
  - Naïve Bayes
  - Perceptron
  - Logistic Regression
  - SVMs
  - Linear Regression
  - Neural Networks
- Unsupervised Models
  - K-means
  - GMMs
  - PCA
- Graphical Models
  - Bayesian Networks
  - HMMs
- Learning Theory
- Reinforcement Learning
- Important Concepts
  - Feature Engineering and Kernels
  - Regularization and Overfitting
  - Experimental Design
  - Ensemble Methods

# Defining a Machine Learning Task (Mitchell, 97)

- A computer program **learns** if its *performance,  $P$* , at some *task,  $T$* , improves with *experience,  $E$* .
- Three components
  - Task,  $T$
  - Performance metric,  $P$
  - Experience,  $E$

# Defining a Machine Learning Task: Example

- Learning to approve loans/lines of credit
- Three components
  - Task, T

Decide whether to extend someone a loan
  - Performance metric, P

Number of people who default on their loan
  - Experience, E

Interviews with loan officers

# Defining a Machine Learning Task: Example

- Learning to approve loans/lines of credit
- Three components
  - Task, T  
Predict the probability someone defaults on a loan
  - Performance metric, P  
Amount of money (interest) made
  - Experience, E  
Historical data on loan defaults

# Things Machine Learning Isn't

- Artificial intelligence: Creating machines that can mimic human behavior/cognition
- Data science: Extracting knowledge/insights from noisy, unstructured data
- Neutral?

# Lecture 1 Polls

**0 done**

 **0 underway**

**Do you agree or disagree with the following sentence:  
"Because machine learning uses algorithms, math and  
data, it is inherently neutral or impartial."**

Agree

Unsure

Disagree

# Things Machine Learning Isn't

- Artificial intelligence: Creating machines that can mimic human behavior/cognition
- Data science: Extracting knowledge/insights from noisy, unstructured data
- Neutral

## Big Data: A Report on Algorithmic Systems, Opportunity, and Civil Rights

Executive Office of the President

May 2016

# Things Machine Learning Isn't

- Artificial intelligence: Creating machines that can mimic human behavior/cognition
- Data science: Extracting knowledge/insights from noisy, unstructured data
- Neutral

## OPPORTUNITIES AND CHALLENGES IN BIG DATA

---

### The Assumption: Big Data is Objective

It is often assumed that big data techniques are unbiased because of the scale of the data and because the techniques are implemented through algorithmic systems. However, it is a mistake to assume they are objective simply because they are data-driven.<sup>13</sup>

The challenges of promoting fairness and overcoming the discriminatory effects of data can be grouped into the following two categories:

- 1) Challenges relating to ***data used as inputs*** to an algorithm; and
- 2) Challenges related to ***the inner workings of the algorithm itself***.

# Defining a Machine Learning Task: Example

- Learning to
- Three components
  - Task,  $T$
  - Performance metric,  $P$
  - Experience,  $E$

# Defining a Machine Learning Task: Example

- Learning to
- Three components
  - Task,  $T$
  - Performance metric,  $P$
  - Experience,  $E$

# Defining a Machine Learning Task: Example

- Learning to
- Three components
  - Task,  $T$
  - Performance metric,  $P$
  - Experience,  $E$

# Our first Machine Learning Task

- Learning to diagnose heart disease  
as a **(supervised) binary classification task**

features

labels

data points

Family History	Resting Blood Pressure	Cholesterol	Heart Disease?
Yes	Low	Normal	No
No	Medium	Normal	No
No	Low	Abnormal	Yes
Yes	Medium	Normal	Yes
Yes	High	Abnormal	Yes

# Our first Machine Learning Task

- Learning to diagnose heart disease  
as a **(supervised) binary classification task**

features			labels
Family History	Resting Blood Pressure	Cholesterol	Heart Disease?
Yes	Low	Normal	No
No	Medium	Normal	No
No	Low	Abnormal	Yes
Yes	Medium	Normal	Yes
Yes	High	Abnormal	Yes

# Our first Machine Learning Task

- Learning to diagnose heart disease  
as a **(supervised) binary classification** task

The diagram illustrates a dataset for heart disease diagnosis. It features a table with four columns: 'Family History', 'Resting Blood Pressure', 'Cholesterol', and 'Heart Disease?'. The first three columns are grouped under the label 'features' with a blue bracket, and the last column is labeled 'labels' with a red bracket. A yellow bracket on the left side of the table groups the five rows under the label 'data points'. The table contains five rows of data. The third row, which has 'No' for Family History, 'Low' for Resting Blood Pressure, 'Abnormal' for Cholesterol, and 'Yes' for Heart Disease, is highlighted with a black border.

features			labels
Family History	Resting Blood Pressure	Cholesterol	Heart Disease?
Yes	Low	Normal	No
No	Medium	Normal	No
No	Low	Abnormal	Yes
Yes	Medium	Normal	Yes
Yes	High	Abnormal	Yes

# Our first Machine Learning Task

- Learning to diagnose heart disease  
as a **(supervised)** classification task

features			labels
Family History	Resting Blood Pressure	Cholesterol	Risk
Yes	Low	Normal	Low Risk
No	Medium	Normal	Low Risk
No	Low	Abnormal	Medium Risk
Yes	Medium	Normal	High Risk
Yes	High	Abnormal	High Risk

# Our first Machine Learning Task

- Learning to diagnose heart disease  
as a **(supervised)** regression task

features

targets

data points

Family History	Resting Blood Pressure	Cholesterol	Medical Costs
Yes	Low	Normal	\$0
No	Medium	Normal	\$20
No	Low	Abnormal	\$30
Yes	Medium	Normal	\$100
Yes	High	Abnormal	\$5000

# Our first Machine Learning Classifier

- A **classifier** is a function that takes feature values as input and outputs a label
- Majority vote classifier: always predict the most common label in the dataset

The diagram shows a table with four columns and five rows. A blue bracket above the first three columns is labeled 'features'. A red bracket above the fourth column is labeled 'labels'. A yellow bracket to the left of the five rows is labeled 'data points'.

	Family History	Resting Blood Pressure	Cholesterol	Heart Disease?
	Yes	Low	Normal	No
	No	Medium	Normal	No
	No	Low	Abnormal	Yes
	Yes	Medium	Normal	Yes
	Yes	High	Abnormal	Yes

# Is this a “good” Classifier?

- A **classifier** is a function that takes feature values as input and outputs a label
- Majority vote classifier: always predict the most common label in the dataset

features			labels
Family History	Resting Blood Pressure	Cholesterol	Heart Disease?
Yes	Low	Normal	No
No	Medium	Normal	No
No	Low	Abnormal	Yes
Yes	Medium	Normal	Yes
Yes	High	Abnormal	Yes

# Training vs. Testing

- A **classifier** is a function that takes feature values as input and outputs a label
- Majority vote classifier: always predict the most common label in the **training** dataset (Yes)

training dataset

Family History	Resting Blood Pressure	Cholesterol	Heart Disease?
Yes	Low	Normal	No
No	Medium	Normal	No
No	Low	Abnormal	Yes
Yes	Medium	Normal	Yes
Yes	High	Abnormal	Yes

# Training vs. Testing

- A **classifier** is a function that takes feature values as input and outputs a label
- Majority vote classifier: always predict the most common label in the **training** dataset (Yes)
- A **test** dataset is used to evaluate a classifier's **predictions**

test dataset	Family History	Resting Blood Pressure	Cholesterol	Heart Disease?	Predictions
	No	Low	Normal	No	Yes
	No	High	Abnormal	Yes	Yes
	Yes	Medium	Abnormal	Yes	Yes

- The **error rate** is the proportion of data points where the prediction is wrong

# Training vs. Testing

- A **classifier** is a function that takes feature values as input and outputs a label
- Majority vote classifier: always predict the most common label in the **training** dataset (Yes)
- A **test** dataset is used to evaluate a classifier's **predictions**

test dataset	Family History	Resting Blood Pressure	Cholesterol	Heart Disease?	Predictions
	No	Low	Normal	No	Yes
	No	High	Abnormal	Yes	Yes
	Yes	Medium	Abnormal	Yes	Yes

- The **test error rate** is the proportion of data points in the test dataset where the prediction is wrong (1/3)

# A Typical (Supervised) Machine Learning Routine

- Step 1 – training
  - Input: a labelled training dataset
  - Output: a classifier
- Step 2 – testing
  - Inputs: a classifier, a test dataset
  - Output: predictions for each test data point
- Step 3 – evaluation
  - Inputs: predictions from step 2, test dataset labels
  - Output: some measure of how good the predictions are;  
usually (but not always) error rate

# Our first Machine Learning Classifier

- A **classifier** is a function that takes feature values as input and outputs a label
- Majority vote classifier: always predict the most common label in the **training** dataset

- This classifier completely ignores the features...

# Our first Machine Learning Classifier

- A **classifier** is a function that takes feature values as input and outputs a label
- Majority vote classifier: always predict the most common label in the **training** dataset

data points

labels

Heart Disease?	Predictions
No	Yes
No	Yes
Yes	Yes
Yes	Yes
Yes	Yes

- The training error rate is  $2/5$

## Our second Machine Learning Classifier

- A **classifier** is a function that takes feature values as input and outputs a label
- Memorizer: if a set of features exists in the **training** dataset, predict its corresponding label; otherwise, predict the majority vote

Family History	Resting Blood Pressure	Cholesterol	Heart Disease?
Yes	Low	Normal	No
No	Medium	Normal	No
No	Low	Abnormal	Yes
Yes	Medium	Normal	Yes
Yes	High	Abnormal	Yes

## Our second Machine Learning Classifier

- A **classifier** is a function that takes feature values as input and outputs a label
- Memorizer: if a set of features exists in the **training** dataset, predict its corresponding label; otherwise, predict the majority vote

Family History	Resting Blood Pressure	Cholesterol	Heart Disease?	Predictions
Yes	Low	Normal	No	No
No	Medium	Normal	No	No
No	Low	Abnormal	Yes	Yes
Yes	Medium	Normal	Yes	Yes
Yes	High	Abnormal	Yes	Yes

- The training error rate is 0!

# Is the memorizer learning?

Yes

No

## Our second Machine Learning Classifier

- A **classifier** is a function that takes feature values as input and outputs a label
- Memorizer: if a set of features exists in the **training** dataset, predict its corresponding label; otherwise, predict the majority vote
- The memorizer (typically) does not **generalize** well, i.e., it does not perform well on unseen data points
- In some sense, good generalization, i.e., the ability to make accurate predictions given a small training dataset, is the whole point of machine learning!

# Key Takeaways

- Components of a machine learning problem
- Machine learning vs. artificial intelligence vs. data science
- Algorithmic bias
- Components of a labelled dataset for supervised learning
- Training vs. test datasets
- Majority vote & memorizer classifiers
