Lecture 1
Introduction

David Andersen
School of Computer Science
Carnegie Mellon University

15-441 Networking, Spring 2005
http://www.cs.cmu.edu/~srini/15-441/S05/

1

Today's Lecture

- **Course outline and goals.**
- **Whirlwind Tour of Networking ™**

2

Instructors

- **Two instructors.**
  - » **David Andersen**
    - – **<dga@cs.cmu.edu> , Wean Hall 8206**
  - » **Srini Seshan**
    - – **<srini+@cs.cmu.edu>, Wean Hall 8113**
- ***N* teaching assistants.**
  - » **Ed Bardsley ebardsle@andrew.cmu.edu - WeH 5201 cluster**
  - » **Eric Burns - latinum@cs.cmu.edu – NSH 4511**
  - » **David Craft dcraft@andrew.cmu.edu – WeH 7th whiteboard**
  - » **2 more TBA**

3

Course Goals

- **Become familiar with the principles and practice of data networking.**
  - » **Routing, transport protocols, naming, ...**
- **Learn how to write applications that use the network.**
  - » **How does a web server work?**
- **Get some understanding about network internals in a hands on way.**
  - » **By building a simple network in software**

4

Course Format

- **~30 lectures.**
  - **Cover the "principles and practice"**
  - **Readings are posted beforehand**
- **3 "paper" homeworks.**
  - **Do you understand and can you apply the material?**
  - **Feedback to students and instructors**
- **2 "lab" homeworks.**
  - **Illustrate networking concepts**
- **Mid-term and final.**
- **2 programming projects.**
  - **How to use and build networks / networked applications**
  - **Application layer; include key ideas from kernel**
  - **Larger, open-ended group projects. *Start early!***

5

Sounds Great! How Do I Get In?

- **Currently 99 people are enrolled, and 9+ people are on the waiting list.**
  - **There is room for 107 students**
  - **In other words: your chances of getting in are very good**
- **We give preference to students attending class.**
  - **Look me up after class**
  - **All else being equal, we go FCFS.**
- **If you do not plan to take the course, please drop it ASAP so somebody else can take your place!**

6

Administrative Stuff

- **Watch the course web page.**
  - **Handouts, readings, ..**
- **Read courses bboards.**
  - **"Announce" for official announcements**
  - **"General" for questions/answers**
- **Office hours posted on web page.**
- **Course secretary**
  - **Barbara Grandillo, Wean Hall 8018**
- **Srini – no office hours this week**
  - **Office hours start Thursday**
- **Books – have people gone to the bookstore? How many copies? *Should* be there…**

7

Grading

- **Roughly equal weight in projects and testing on course contents.**
- **20% for Project I**
- **25% for Project II**
- **15% for Midterm**
- **25% for Final exam**
- **15% for Homeworks**
- **You need to demonstrate competence in both projects and tests to pass the course.**

8

Policy on Collaboration

- **Working together is important.**
  - » **Discuss course material in general terms**
  - » **Work together on program debugging, ..**
- **Parts *must* be your own work**
  - » **Homeworks, midterm, final**
- **Projects: Teams of two**
  - » **Collaboration, group project skills**
  - » **Both students should understand the entire project**
- **Web page has details.**

9

Policy on Late Work and Regrading

- **No assignments with a "short fuse".**
  - » **Homeworks: ~1 week**
  - » **Projects: ~5 weeks**
- **Late work will receive a 10% penalty/day.**
  - » **No penalty for a limited number of handins - see web page**
  - » **No assignment can be more than 2 days late**
- **Only exception is documented illness and family emergencies**
- **Start on time!**
  - » **Every year some students discover that a 4 week project cannot be completed in a week**
- **Requests for regrading must be submitted in writing with course secretary within 2 weeks.**
  - » **Regrading will be done by original grader**

10

This Week

- Intro – what's this all about?
- Network programming review.
  - » Socket programming (213 review++)
  - » Project management (RCS, etc.)
- Outline
  - » Low-level (physical, link, circuits, etc.)
  - » Internet core concepts (addressing, routing, DNS)
  - » Advanced topics
- On to the good stuff…

11

What Is a Network?

- Collection of nodes and links that connect them
- This is vague. Why? Consider different networks:
  - » Internet
  - » Andrew
  - » Telephone
  - » Your house
  - » Others – sensor nets, cell phones, …
- Focus on Internet, but understand important common issues and challenges

12

Networks Juggle Many Goals

- **Efficiency – resource use; cost**
- **The "ilities":**
  - » **Evolvability**
  - » **Managability**
  - » **Security (securability, if you must)**
  - » **Ease of:**
    - – **Creation**
    - – **Deployment**
    - – **Management**
    - – ***Creating useful applications***
  - » **Scalability**

13

Challenges for Networks

- **Geographic scope**
  - » **The Internet vs. Andrew, etc.**
- **Scale**
  - » **The Internet vs. your home network**
- **Application types**
  - » **Email vs. Videoconferencing**
- **Trust and Administration**
  - » **Corporate network – one network "provider"**
  - » **Internet – 17,000 network providers**

14

How to Draw a Network

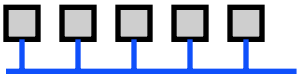
15

Building block: The Links

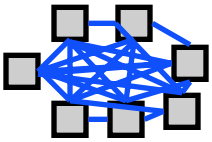
- **Electrical questions**
  - » **Voltage, frequency, …**
  - » **Wired or wireless?**
- **Link-layer issues: How to send data?**
  - » **When to talk – can everyone talk at once?**
  - » **What to say – low-level format?**
  - » **Stay tuned for lecture 5**
- **Okay… what about more nodes?**

16

- **… But what if we want more hosts?**



One wire



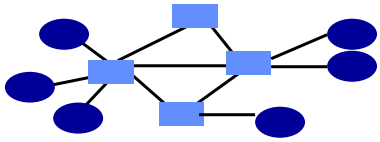
Wires for everybody!

- **Scalability?!**

17

Multiplexing!

- **Need to share network resources**

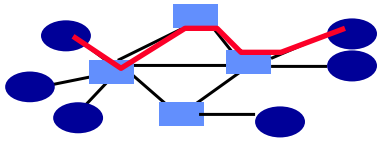


- **How? Switched network**
  - » **Party "A" gets resources sometimes**
  - » **Party "B" gets them sometimes**
- **Interior nodes act as "Routers" or "Switches"**
- **What mechanisms can share resources?**

18

Circuit Switching

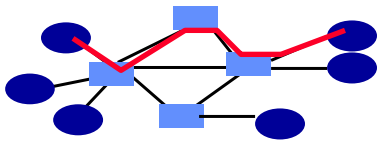
- Source first establishes a connection (circuit) to the destination.
  - » Each router or switch along the way may reserve some bandwidth for the data flow
- Source sends the data over the circuit.
  - » No need to include the destination address with the data since the routers know the path
- The connection is torn down.
- Example: telephone network (analog).



19

Circuit Switching

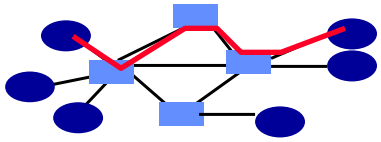
- Source first establishes a connection (circuit) to the destination.
- Source sends the data over the circuit.
  - » e connection is torn down.
- Example: telephone network
  - » Early early versions: Human-mediated switches.
  - » Early versions: End-to-end electrical connection!
  - » Today: Virtual circuits or lambda switching



20

Circuit Switching 2

- What about many connections?
  - » Many wires (e.g., those big 200-pair cables you sometimes see)
- A more practical approach is to multiplex multiple circuits over a single “fast” wire.
  - » Can benefit from improvements in technology
  - » Fewer wires
  - » Multiplexing is discussed in more detail in Lecture 5



21

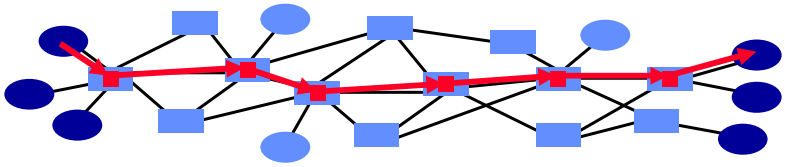
Circuit Switching Discussion

- Circuits have some very attractive properties.
  - » Fast and simple data transfer, once the circuit has been established
  - » Predictable performance since the circuit provides isolation from other users
  - » E.g. guaranteed bandwidth
- But it also has some shortcomings.
  - » How about bursty traffic
    - – circuit will be idle for significant periods of time
  - » How about users with different bandwidth needs
    - – do they have to use multiple circuits
- Alternative: packet switching.

22

Packet Switching (our emphasis)

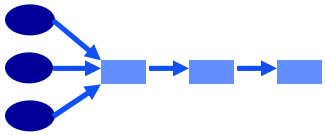
- Source sends information as self-contained packets that have an address.
  - » Source may have to break up single message in multiple
- Each packet travels independently to the destination host.
  - » Routers and switches use the address in the packet to determine how to forward the packets
- Analogy: a letter in surface mail.



23

Statistical Multiplexing

- Switches arbitrate between inputs



- Can send from *any* input that's ready
  - » Links never idle when traffic to send
  - » (Efficiency!)
- What networks can we build with these tools?

24

Local Area Networks (LANs)

- **Benefits of being "local":**
  - » **Lower cost**
  - » **Short distance = faster links, low latency**
    - – **Efficiency less pressing**
  - » **One management domain**
  - » **More homogenous**
- **Examples:**
  - » **Ethernet (Lecture 7)**
  - » **Token ring, FDDI**
  - » **802.11 wireless (Lecture 21)**

25

Wide Area Networks

Distance makes things harder:

- **High(er) delays and cost → Need efficiency**
- **Larger size → Need scalability**
- **Heterogeneity:**
  - » **Traffic types**
  - » **Host needs**
- **Administrative diversity → Management harder**

Let's look at one prominent example:

26

"The Internet"

- An inter-net: a network of networks.
  - A set of networks that are connected with each other
  - Networks are connected using routers that support communication in a hierarchical fashion
  - Often need other special devices at the boundaries for security, accounting, ..
- The Internet: the interconnected set of networks of the Internet Service Providers (ISPs) providing data communications services.
  - About 17,000 different networks make up the Internet
- In order to inter-operate, all participating networks have to follow a common set of rules.

27

Challenges of the Internet

- Scale: 100,000,000s of hosts
- Heterogeneity:
  - 18,000+ administrative domains
  - Thousands of applications
  - Lots of users
  - Fast links, slow links, satellite links, cellular links, carrier pigeons
- Diversity of network technologies
- Adversarial environment
- Oh, and let's make it easy to use…

28

Implementing Packet-Switched Networks

- **Requirements for packets:**
  - » **Header information: Addresses, etc. (Lecture 9)**
  - » **Data. What is packet size limit? (Lectures 5—9)**
  - » **Everybody has to agree on these for interoperability**
- **How do packets reach destination? Routing**
  - » **Nodes in network forward packets towards destination**
  - » **Routing tells nodes where to send the packets they receive**
    - – **Design questions: What criteria to decide?**
      - **Destination is a must**
      - **Source?**
      - **"Type"?**

Routing

- **Who chooses the routes?**
  - » **A human: Static routing**
  - » **Centralized routing (telenet, c.a. 1980s)**
  - » **Distributed routing (Internet, …)**
- **Distributed routing uses a *Routing Protocol***
  - » **Many different protocols are in use.**
  - » **Inside an organization: RIP, OSPF, etc (Lecture 11)**
  - » **Between organizations: BGP (Lecture 12)**

Network Service Model

- **What is the *service model?***
  - » **Ethernet/Internet: *best-effort* – packets can get lost, etc.**
- **What if you want more?**
  - » **Network can do it – Quality of Service**
    - – **Benefits of circuit switching in packet-switched net**
    - – **Hard in the Internet, easy in restricted contexts**
    - – **Lecture 20**
  - » **Hosts can do it – end-to-end *Transport protocols***
    - – **TCP performs end-to-end retransmission of lost packets to give the illusion of a reliable underlying network.**

    (Lectures 16—19)

31

Using Networks

- **Layering and abstraction**
  - » **Protocol stacks failicate re-use**
  - » **Hide underlying complexity from the programmer**
  - » **(Lecture 3)**
  - » **Protocol reuse *and* code/library reuse**
- **Tomorrow's lecture: Programmer API**
- **Many "human-friendly" abstractions:**
  - » **Higher-level protocols (e.g., reuse the Web's HTTP instead of writing your own!).**
  - » **Naming (www.google.com vs. 64.233.161.99)**
    - – **The Domain Name System, or DNS (Lecture 13)**

32

Using Networks *Securely*

- **The Internet is an unfriendly place**
  - » **Hacking, viruses, denial-of-service, etc.**
- **Cryptography to the rescue:**
  - » **Secure Sockets Layer (SSL) – https://www.foo.com/**
  - » **Key management, etc.**
  - » **Lecture 25**
- **Policy control to the rescue:**
  - » **Firewalls / Denial of Service (Lecture 26)**
  - » **Network address translation / virtual private networks (NAT, VPN) – Lecture 14**

33

Applications

- **All well and good to have networks that deliver packets, but what do we actually *do* with them?**
- **The Web (Lecture 23)**
- **Peer to Peer (Lecture 24)**
- **Funky research stuff (Lecture 27)**
- **Class Projects (…)**
  - » **Remember, get started early. ☺**

34
