# Emergence of Smart Glass

**Head-up display**  
Quick information access

**Camera**  
Near effortless capture

**Functionality**  
Roughly a smart phone

# Micro-interactions

Not distract users from current context

- Brief stimulus from the system
- Quick and unobtrusive response

## Two second rule

*“Anything that takes you more than two seconds to accomplish, needs a good reason to be done. Anything that takes significantly less you will do without a second thought.”<sup>†</sup>*

<sup>†</sup> P. Lukowicz. Head-Mounted Displays: From Cyborgs to Google Glass. Wearable Technologies. May 2013.

*What high value micro-interactions  
can one have with a Glass user?*

# QuiltView Introduction

QuiltView is a near-real-time crowd-sourced system in which users reply to queries with videos through Glass.

- Queries are **geo-casted** to **selected** users

# Why Video?

How is the night market now (at Taipei)?

## Choice one

- Respond with text
- “*Um... the weather is good here, but it's pretty crowded and noisy, as usual. I see people selling pants, bags...*”

## Choice two

- Respond with video

# Simple Queries, Deep Answers

How is the night market now (at Taipei)?

*“Um... the weather is good here, but it's pretty crowded and noisy, as usual. I see people selling pants, bags...”*

- Videos “bring you to the scene”
  - *“If a picture is worth a thousand words, then a video is worth a million”* <sup>†</sup>
- Answer depends on personal taste
  - Requester can judge with his own knowledge and taste
  - Raw data is better than interpreted data

<sup>†</sup>Olson, T., Loquist, J., October 2010

# Avoid Too Many Queries

## Result caching

- “Similar” queries within a short time

## Opt-in preferences

- Max queries/unit time
- Topics

## Random sampling

- Choose a subset from eligible users

## Credit system

- Similar to that in AMT
- Prevent spam users

# Prototype – Server & Client

- Server: Amazon EC2, Django
- Client: GDK, background service

## Make your query at QuiltView!

You are now logged in as zhuoc@cs.cmu.edu. [Log Out](#)

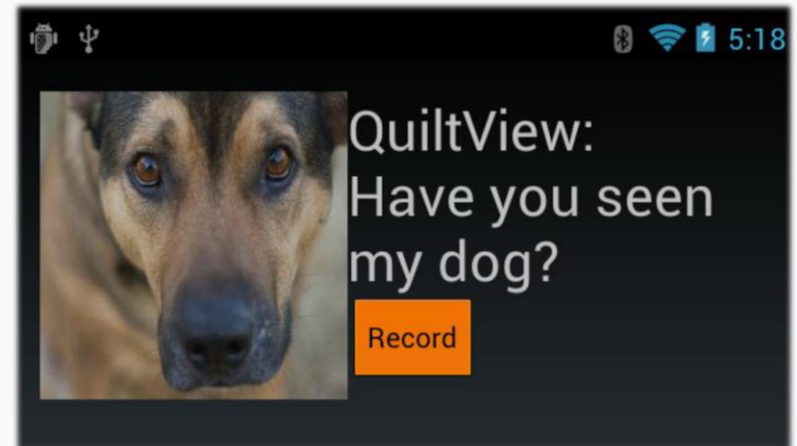

## Write your query below:

e.g. What is the weather

[Show more options](#)

Check existing

Submit

# Prototype – Similarity Detection

- Semantic similarity – Gensim
  - Open-sourced python package
  - 9GB compressed corpus of the entire English Wikipedia

Queries	Matched Results
Is there a thunderstorm?	What is the weather? Is it raining? Is it cold outside?
How is the thesis defense?	Are the professor's questions hard?

**2. QuiltView  
Design**

**3. Architecture  
&  
Prototype**

**4. Discussions**

# Queries – What Can QuiltView Do?

**Good Examples** – local, near-real-time, subjective

Is the situation serious?

How's the free food?

How long is the queue?

How is the traffic?

**Bad Examples** –large-area, long-term facts, objective

– What is the population in the US?

# Privacy

Share only with friends  
(e.g. Facebook)

Automatic denaturing  
(removing face, etc.)

Glass screen turned on  
while recording

Explicit confirmation  
by the Glass wearer

# Missing in the Talk

- Restriction on queries
- SSL
- Mozilla Persona
- Inaccuracy in query similarity detection
- Virtual user for simulation
- Related work

Micro-interactions  
have great potential

QuiltView offers a  
valuable use

Interesting questions  
to be explored

**Thank you! Questions?**
